Human Subjects Research Regulation I. Glenn Cohen, Holly Fernandez Lynch, 2014-07-11 Experts from different disciplines offer novel ideas for improving research oversight and protection of human subjects The current framework for

the regulation of human subjects research emerged largely in reaction to the horrors of Nazi human experimentation revealed at the Nuremberg trials and the Tuskegee syphilis study conducted by U S government researchers from 1932 to 1972 This framework combining elements of paternalism with efforts to preserve individual autonomy has remained fundamentally unchanged for decades Yet as this book documents it has significant flaws including its potential to burden important research overprotect some subjects and inadequately protect others generate inconsistent results and lag behind developments in how research is conducted Invigorated by the U S government's first steps toward change in over twenty years Human Subjects Research Regulation brings together the leading thinkers in this field from ethics law medicine and public policy to discuss how to make the system better The result is a collection of novel ideas some incremental some radical for the future of research oversight and human subject protection After reviewing the history of U S research regulations the contributors consider such topics as risk based regulation research involving vulnerable populations including military personnel children and prisoners the relationships among subjects investigators sponsors and institutional review boards privacy especially regarding biospecimens and tissue banking and the possibility of fundamental paradigm shifts

Humanity Enhanced Russell Blackford, 2013-12-06 An argument that modern liberal democracies should tolerate human enhancement technologies answering key objections by critics of these practices Emerging biotechnologies that manipulate human genetic material have drawn a chorus of objections from politicians pundits and scholars In *Humanity Enhanced* Russell Blackford eschews the heated rhetoric that surrounds genetic enhancement technologies to examine them in the context of liberal thought discussing the public policy issues they raise from legal and political perspectives Some see the possibility of genetic choice as challenging the values of liberal democracy Blackford argues that the challenge is not as commonly supposed the urgent need for a strict regulatory action Rather the challenge is that fear of these technologies has created an atmosphere in which liberal tolerance itself is threatened Focusing on reproductive cloning pre implantation genetic diagnosis of embryos and genetic engineering Blackford takes on objections to enhancement technologies raised by Jürgen Habermas and others based on such concerns as individual autonomy and distributive justice He argues that some enhancements would be genuinely beneficial and that it would be justified in some circumstances even to exert pressure on parents to undertake genetic modification of embryos Blackford argues against draconian suppression of human enhancement although he acknowledges that some specific and limited regulation may be required in the future More generally he argues liberal democracies would demonstrate liberal

values by tolerating and accepting the emerging technologies of genetic choice

The Censor's Hand Carl E.

Schneider, 2015-04-24 An argument that the system of boards that license human subject research is so fundamentally misconceived that it inevitably does more harm than good Medical and social progress depend on research with human subjects When that research is done in institutions getting federal money it is regulated often minutely by federally required and supervised bureaucracies called institutional review boards IRBs Do can these IRBs do more harm than good In *The Censor's Hand* Schneider addresses this crucial but long unasked question Schneider answers the question by consulting a critical but ignored experience the law's learning about regulation and by amassing empirical evidence that is scattered around many literatures He concludes that IRBs were fundamentally misconceived Their usefulness to human subjects is doubtful but they clearly delay distort and deter research that can save people's lives soothe their suffering and enhance their welfare IRBs demonstrably make decisions poorly They cannot be expected to make decisions well for they lack the expertise ethical principles legal rules effective procedures and accountability essential to good regulation And IRBs are censors in the place censorship is most damaging universities In sum Schneider argues that IRBs are bad regulation that inescapably do more harm than good They were an irreparable mistake that should be abandoned so that research can be conducted properly and regulated sensibly

The Politics of Adoption Bruno Perreau, 2014-05-02 An argument that French

adoption policies reflect and enforce the state's notions of gender parenthood and citizenship In May 2013 after months of controversy France legalized same sex marriage and adoption by homosexual couples Obstacles to adoption and parenting equality remain however many of them in the form of cultural and political norms reflected and expressed in French adoption policies In *The Politics of Adoption* Bruno Perreau describes the evolution of these policies In the past thirty years Perreau explains political and intellectual life in France have been dominated by debates over how to preserve Frenchness and these debates have driven policy making Adoption policies he argues link adoption to citizenship reflecting and enforcing the postcolonial state's notions of parenthood gender and Frenchness After reviewing the complex history of adoption Perreau examines French political debates over adoption noting among other things that intercountry adoptions stirred far less controversy than the difference between the sexes in an adopting couple He also discusses judicial action on adoption child welfare agencies as gatekeepers to parenthood as defined by experts the approval process from the viewpoints of social workers and applicants and adoption's link to citizenship and its use as a metaphor for belonging Adopting a Foucaultian perspective Perreau calls the biopolitics of adoption pastoral it manages the individual for the good of the collective flock it considers itself outside politics and it considers not so much the real behavior of individuals as an allegorical representation of them His argument sheds new light on American debates on bioethics identity and citizenship

Long-Term Forensic

Psychiatric Care Birgit Völm, Peter Braun, 2019-05-16 This book provides an overview of forensic psychiatry focusing on the provision of care in Europe as well as the legal and ethical challenges posed by long term stays in forensic settings Forensic

psychiatric services provide care and treatment for mentally disordered offenders MDOs in secure in patient facilities as well as in the community These services are high cost low volume services they pose significant restrictions on patients and hence raise considerable ethical challenges There is no agreed upon standard for length of stay LoS in secure settings and patients detainment periods vary considerably across countries and even within the same jurisdiction Thus far little research has been conducted to identify factors associated with length of stay consequently it remains unclear how services should be configured to meet the needs of this patient group This volume fills some of those gaps Furthermore it presents new research on factors associated with length of stay both patient related and organisational Various approaches to the provision of care for long term patients in different countries are explored including a few best practise examples in this specific area of psychiatry The book also addresses the perspective of those working in forensic care by reviewing quality of life research and interviews with patients The authors of this volume come from a range of professional backgrounds ensuring a certain breadth and depth in the topic discussion and even includes patients themselves as co authors

Nursing Ethics: Across the Curriculum and Into Practice Janie B. Butts, Karen L. Rich, 2019-02-05 The fifth edition of Nursing Ethics has been revised to reflect the most current issues in healthcare ethics including new cases laws and policies The text continues to be divided into three sections Foundational Theories Concepts and Professional Issues Moving Into Ethics Across the Lifespan and Ethics Related to Special Issues focused on specific populations and nursing roles

New Methuselahs John K. Davis, 2018-07-31 An examination of the ethical issues raised by the possibility of human life extension including its desirability unequal access and the threat of overpopulation Life extension slowing or halting human aging is now being taken seriously by many scientists Although no techniques to slow human aging yet exist researchers have successfully slowed aging in yeast mice and fruit flies and have determined that humans share aging related genes with these species In New Methuselahs John Davis offers a philosophical discussion of the ethical issues raised by the possibility of human life extension Why consider these issues now before human life extension is a reality Davis points out that even today we are making policy and funding decisions about human life extension research that have ethical implications With New Methuselahs he provides a comprehensive guide to these issues offering policy recommendations and a qualified defense of life extension After an overview of the ethics and science of life extension Davis considers such issues as the desirability of extended life whether refusing extended life is a form of suicide the Malthusian threat of overpopulation equal access to life extension and life extension and the right against harm In the end Davis sides neither with those who argue that there are no moral objections to life enhancement nor with those who argue that the moral objections are so strong that we should never develop it Davis argues that life extension is on balance a good thing and that we should fund life extension research aggressively and he proposes a feasible and just policy for preventing an overpopulation crisis

Ethics in Everyday Places Tom Koch, 2022-11-01 An exploration of moral stress distress and injuries inherent in modern society through the maps that

pervade academic and public communications worlds In *Ethics in Everyday Places* ethicist and geographer Tom Koch considers what happens when as he puts it you do everything right but know you've done something wrong The resulting moral stress and injury he argues are pervasive in modern Western society Koch makes his argument from the ground up from the perspective of average persons and through a revealing series of maps in which issues of ethics and morality are embedded The book begins with a general grounding in both moral stress and mapping as a means of investigation The author then examines the ethical dilemmas of mapmakers and others in the popular media and the sciences including graphic artists journalists researchers and social scientists Koch expands from the particular to the general from mapmaker and journalist to the readers of maps and news He explores the moral stress and injury in educational funding poverty and income inequality Why aren't we angry that one in eight fellow citizens lives in federally certified poverty transportation modeling seen in the iconic map of the London transit system and the hidden realities of exclusion and U.S. graft organ transplantation This uniquely interdisciplinary work rewrites our understanding of the nature of moral stress distress and injury and ethics in modern life Written accessibly and engagingly it transforms how we think of ethics personal and professional amid the often conflicting moral injunctions across modern society Copublished with Esri Press
