

A photograph of several scarlet macaws in a natural habitat. The birds are perched on a large, light-colored rock in the foreground and on a thick, horizontal branch in the background. They have vibrant red plumage on their heads and chests, with blue and green feathers on their wings and tails. The background is filled with dense green foliage. The text is overlaid on a dark red rectangular background.

A Primer Of Conservation Biology Fifth Edition:

A Primer of Conservation Biology Richard B. Primack, 2012 This text introduces the key elements of the dynamic multidisciplinary field of conservation biology covering such issues as sustainable development global warming and strategies to save species on the verge of extinction *A Primer of Conservation Biology* Richard B. Primack, 2004-01-01 A Primer of Conservation Biology Third Edition incorporates background theory and examples in a lively and readable text that will appeal to a wide audience and stimulate interest in conservation biology The book provides the most up to date perspective on many high profile issues in the field such as sustainable development the effectiveness of conservation laws and treaties the design of conservation areas classification of conservation threats and strategies to save species on the verge of extinction The Primer is divided into five chapters focusing successively on biological diversity and its value the threats to biological diversity conservation at the population and species levels protecting and managing habitats and ecosystems and human societies and sustainable development Case studies are included to demonstrate the controversies in the field and to stimulate thought and discussion The book provides many examples of successful conservation approaches and ends with suggestions for a future agenda Throughout the choice of examples is well balanced to show the full range of species habitats and geographic areas of the world The links between conservation biology and environmental law environmental economics philosophy social sciences and anthropology park management and government policy are clearly presented The book is very well illustrated includes an extensive bibliography covering literature through 2004 and a glossary and has an annotated list of suggested readings and discussion questions at the end of each chapter Sources of further information are given in an Appendix A Primer of Conservation Biology is ideally suited for use in short undergraduate courses either as a stand alone text or supplemented by outside readings It can also be used effectively as a supplemental resource for courses in introductory biology general ecology population biology environmental science and w

Herpetology Laurie J. Vitt, Janalee P. Caldwell, 2013-03-25 The fourth edition of the textbook Herpetology covers the basic biology of amphibians and reptiles with updates in nearly every conceptual area Not only does it serve as a solid foundation for modern herpetology courses but it is also relevant to courses in ecology behavior evolution systematics and morphology Examples taken from amphibians and reptiles throughout the world make this book a useful herpetology textbook in several countries Naturalists amateur herpetologists herpetoculturists zoo professionals and many others will find this book readable and full of relevant natural history and distributional information Amphibians and reptiles have assumed a central role in research because of the diversity of ecological physiological morphological behavioral and evolutionary patterns they exhibit This fully revised edition brings the latest research to the reader ranging over topics in evolution reproduction behavior and more allowing students and professionals to keep current with a quickly moving field Heavily revised and updated with discussion of squamate lizard and snake taxonomy and new content reflected in current

literature Includes increased focus on conservation biology in herpetology while retaining solid content on organismal biology of reptiles and amphibians Presents new photos included from authors extensive library *Non-native Species and Their Role in the Environment* Radu Cornel Guiaşu, 2016-08-01 The young field of invasion biology initially a branch of ecology and conservation biology has greatly expanded particularly in the last two and a half decades or so As a result the potential negative effects of introduced species have been widely advertised and sometimes perhaps overemphasized This book attempts to restore some balance to the current debate over the role of non native species by offering a broader perspective and taking a longer term evolutionary look at these species and their impact in their new environments The relatively arbitrary nature of terms such as native and non native and the rather inconsistent ways in which such terms are applied to biological species as well as the subjective boundaries of so called native ranges are analyzed The role of non native species in their new environments can be considerably more complex than the anti introduced species information would often suggest Thus the more positive and nuanced perspective on introduced species and their impact offered in this book is much needed and long overdue **Steve and Bindi Irwin** Amy Breguet, 2013 Steve Irwin an Australian wildlife conservationist brought adventure and the wilderness to television with his wildly popular TV show The Crocodile Hunter

The Everglades Handbook Thomas E. Lodge, Stephen E. Davis III, 2023-09-11 The Everglades Handbook Understanding the Ecosystem Fifth Edition is packed with scientific information about the greater Everglades ecosystem taking into account how drastically the Everglades has changed The book covers disciplines ranging from ecology geology climatology hydrology simplified biogeochemistry and anthropology to conservation biology The fifth edition of this bestselling guide presents expanded treatment of subjects where our knowledge of the Everglades and its restoration has greatly improved as well as updates throughout This more detailed coverage includes a new chapter Everglades Chemistry A Primer and an expanded section on the role of human intervention in Everglades restoration as well as numerous new graphics that bring the science to life Written in Tom Lodge s trademark accessible style combined with the expertise of new coauthor Stephen E Davis III Chief Science Officer with the Everglades Foundation this extensively researched text is essential reading for anybody trying to understand the challenges we face in restoring this unique ecosystem **Essentials of Conservation Biology** Richard B. Primack, 2010 This volume combines theory with applied and basic research to explain the connections between conservation biology and environmental economics ethics law and the social sciences It stresses the need for theory research and an interdisciplinary approach in solving conservation problems *The Zoological Record*, 2000 *Machine Learning for Ecology and Sustainable Natural Resource Management* Grant Humphries, Dawn R. Magness, Falk Huettmann, 2018-11-05 Ecologists and natural resource managers are charged with making complex management decisions in the face of a rapidly changing environment resulting from climate change energy development urban sprawl invasive species and globalization Advances in Geographic Information System GIS technology digitization online data availability historic legacy datasets

remote sensors and the ability to collect data on animal movements via satellite and GPS have given rise to large highly complex datasets. These datasets could be utilized for making critical management decisions but are often messy and difficult to interpret. Basic artificial intelligence algorithms i.e. machine learning are powerful tools that are shaping the world and must be taken advantage of in the life sciences. In ecology machine learning algorithms are critical to helping resource managers synthesize information to better understand complex ecological systems. Machine Learning has a wide variety of powerful applications with three general uses that are of particular interest to ecologists: 1. data exploration to gain system knowledge and generate new hypotheses, 2. predicting ecological patterns in space and time, and 3. pattern recognition for ecological sampling. Machine learning can be used to make predictive assessments even when relationships between variables are poorly understood. When traditional techniques fail to capture the relationship between variables, effective use of machine learning can unearth and capture previously unattainable insights into an ecosystem's complexity. Currently, many ecologists do not utilize machine learning as a part of the scientific process. This volume highlights how machine learning techniques can complement the traditional methodologies currently applied in this field.

Reconciling Human Needs and Conserving Biodiversity: Large Landscapes as a New Conservation Paradigm Bila-Isia Inogwabini, 2020-02-18

Protected areas have often been defined as the backbones of biodiversity conservation. Protected areas have often been defined as the backbones of biodiversity conservation. However, legitimate demands formulated by countries for their economic development, growing human populations, forest fragmentations, and needs of local communities for sustainable livelihoods are also pressing demands on protected areas, stringently pressuring conservation communities to identify means to reconcile long-term biodiversity conservation and communities' livelihoods. Hence, integrating conservation activities within the global framework of economic development of countries with high biodiversity had become part of conservation paradigms. Integrated development as a route to conservation, strict protected areas, community managed areas, etc. have been tried but resulted in debatable outcomes in many ways. The lukewarm nature of these results brought landscape approach at the front of biodiversity conservation in Central Africa. Since the late 1990s, the landscape approach uses large areas with different functional attributes and shifts foundational biodiversity conservation paradigms. Changes are brought to the role traditionally attributed to local communities, aligning sustainable development with conservation and stretching conservation beyond the confines of traditional protected areas. These three shifts need a holistic approach to respond to different conservation questions. There are only a few instances where the landscape experience has been scientifically documented and lessons learnt drawn into a corpus of knowledge to guide future conservation initiatives across Central Africa. To subjugate one biodiversity conservation landscape as one case study emerged as a matter of urgency to present the potential knowledge acquired throughout the landscape experiment, including leadership and management processes, tried results, at least partially achieved, and why such and such other process or management arrangement were been chosen among many

other alternatives etc The challenges of the implementation of the conservation landscape approach needed also to be documented This book responds to the majority of these questions drawing its content from the firsthand field knowledge it discusses these shifts and documents what has been tried how successful unsuccessful it was and what lessons learnt from these trials Theoretical questions such as threat index and ecological services etc are also discussed and gaps in knowledge are identified
