Divided into five parts, with an editor's introduction, this volume presents the perspectives of users of translation technologies and of researchers concerned with issues arising from the increasing interdependency between translation and technology. The chapters in this Handbook tackle the advent of technologization at both a technical and a philosophical level, based on industry practice and academic research. Containing over 30 authoritative, cutting-edge chapters, this is an essential reference and resource for those studying and researching translation and technology. The volume will also be valuable for translators, computational linguists, and developers of translation tools.

*Localizing Apps* Johann Roturier, 2015-05-08 The software industry has undergone rapid development since the beginning of the twenty-first century. These changes have had a profound impact on translators who, due to the evolving nature of digital content, are under increasing pressure to adapt their ways of working. *Localizing Apps* looks at these challenges by focusing on the localization of software applications or apps. In each of the five core chapters, Johann Roturier examines the role of translation and other linguistic activities in adapting software to the needs of different cultures. *Localization* The procedures required to prepare source content before it gets localized. *Internationalization* The measures taken by software companies to guarantee the quality and success of a localized app. With practical tasks, suggestions for further reading, and concise chapter summaries, *Localizing Apps* takes a comprehensive look at the transformation processes and tools used by the software industry today. This text is essential reading for students.
