Funds of Hedge Funds Greg N. Gregoriou, 2011-04-01 With about 450 billion in assets, funds of hedge funds are the most recent darling of investors. While hedge funds carry high risk for the promise of high returns, they are designed for the very rich and for large institutional investors such as pension funds. A Fund of Hedge Funds (FOF) spreads investments among a number of hedge funds to reduce risk and provide diversification while maintaining the potential for higher than average returns. Odds are that some pension fund of yours is invested heavily in these products, and more recently these FOFs have been opened to more and more individual investors in offshore jurisdictions with lower minimum entry levels. Since this is a new and extremely fast-moving financial phenomenon, academic research has just begun in earnest, and this is the first book to present rigorous academic research by some of the leading lights in academic finance, carefully analyzing the broad array of issues involved in FOFs. With over 450 billion in assets, hedge funds of funds are the darling of investors. First book to present rigorous academic research about funds of funds. Leading lights in academic finance from around the world analyze the broad array of issues involved in funds of funds.

The Analytics of Risk Model Validation George A. Christodoulakis, Stephen Satchell, 2007-11-14 Risk model validation is an emerging and important area of research and has arisen because of Basel I and II. These regulatory initiatives require trading institutions and lending institutions to compute their reserve capital in a highly analytic way based on the use of internal risk models. It is part of the regulatory structure that these risk models be validated both internally and externally, and there is a great shortage of information as to best practice. Editors Christodoulakis and Satchell collect papers that are beginning to appear by regulators, consultants, and academics to provide the first collection that focuses on the quantitative side of model validation. The book covers the three main areas of risk: Credit Risk, Market Risk, and Operational Risk. Risk model validation is a requirement of Basel I and II. The first collection of papers in this new and developing area of research. International authors cover model validation in credit, market, and
