Krusp,Liqiu Meng,Roland Pail,Uwe Stilla,2012-11-13 This book provides a collection of selected articles that have been submitted to the Earth Observation and Global Changes EOGC2011 Conference All articles have been carefully reviewed by an international board of top level experts The book covers a wide variety of topics including Physical Geodesy Photogrammetry Remote Sensing High Resolution and Fast Revisiting Remote Sensing Satellite Systems Global Change Change Detection Spatial Modelling GIS Geovisualization The articles document concrete results of current studies related to Earth Sciences The book is intended for researchers and experts working in the area of Spatial Data Analysis Environmental Monitoring Analysis Global Change Monitoring and related fields

Scientific Satellite and Moon-Based Earth Observation for Global Change Huadong Guo,Wenxue Fu,Guang Liu,2019-06-27 Global change involves complex and far reaching variations in the Earth s systems and satellite observations have been widely used in global change studies Over the past five decades Earth observation has developed into a comprehensive system that can conduct dynamic monitoring of the land the oceans and the atmosphere at the local regional and even global scale At the same time although a large number of Earth observation satellites have been launched very few of them are used in global change studies The lack of scientific satellite programs greatly hinders research on global change This book proposes using a series of global change scientific satellites to establish a scientific observation grid for global environmental change monitoring from space and offers the first comprehensive review of lunar based Earth observation These scientific satellites could provide not only basic datasets but also scientific support in facilitating advances in international global change research

Advances in Earth Science J. M. T. Thompson,2007 Advances in Earth Science outlines the latest developments and new research directions currently being made world wide in the earth sciences It contains invited and refereed articles by leading younger researchers on their cutting edge research but aimed at a general scientific audience This exciting volume explains how powerful methodologies such as satellite remote sensing and supercomputing simulations are now profoundly changing research in the earth sciences how the earth system is

increasingly being viewed in a holistic way linking the atmosphere ocean and solid earth and how the societal impact of the research in the earth sciences has never been more important Published by Imperial College Press in collaboration with the Royal Society of London the book features many articles originating from invited papers published in the Philosophical Transactions of the Royal Society Eleven of the distinguished contributors hold prestigious Royal Society Research Fellowships

Earth Observation Data Cubes Gregory Giuliani,Gilberto Camara,Brian Killough,Stuart Minchin,2020-03-16

Satellite Earth observation EO data have already exceeded the petabyte scale and are increasingly freely and openly available from different data providers This poses a number of issues in terms of volume e g data volumes have increased 10 in the last 5 years velocity e g Sentinel 2 is capturing a new image of any given place every 5 days and variety e g different types of sensors spatial spectral resolutions Traditional approaches to the acquisition management distribution and analysis of EO data have limitations e g data size heterogeneity and complexity that impede their true information potential to be realized Addressing these big data challenges requires a change of paradigm and a move away from local processing and data distribution methods to lower the barriers caused by data size and related complications in data management To tackle these issues EO data cubes EODC are a new paradigm revolutionizing the way users can store organize manage and analyze EO data This Special Issue is consequently aiming to cover the most recent advances in EODC developments and implementations to broaden the use of EO data to larger communities of users support decision makers with timely and actionable information converted into meaningful geophysical variables and ultimately unlock the information power of EO data

Earth Observation Rustam B. Rustamov,Saida Salahova,2012-01-27

Today space technology is used as an excellent instrument for Earth observation applications Data is collected using satellites and other available platforms for remote

sensing Remote sensing data collection detects a wide range of electromagnetic energy which is emitting transmitting or reflecting from the Earth's surface. Appropriate detection systems are needed to implement further data processing. Space technology has been found to be a successful application for studying climate change as current and past data can be dynamically compared. This book presents different aspects of climate change and discusses space technology applications.
