Advances And Technical Standards In Neurosurgery:

Advances and Technical Standards in Neurosurgery Concezio Di Rocco, 2024-10-20 This book presents a comprehensive update on some crucial aspects of brain and spinal tumoral pathology that strongly influence the current surgical management. It covers a range of topics from the latest results of molecular diagnosis for tumors still considered unsuitable for surgical excision to the increasing use of minimally invasive approaches made possible by the wide application of neuroendoscopic techniques. The first three chapters discuss basic research on the potential benefits of new less invasive and more sophisticated techniques for brain exploration. The following four chapters examine how modern instruments for intraoperative visualization are modifying the traditional paradigm of classical neurosurgery. Two chapters describe the recent understanding of two of the most relevant intracranial tumors that still pose challenges for successful treatment, namely the tumor of the pineal region and ependymomas. Two more chapters are devoted to the management of brain tumors: the first exploring the valuable information that can be derived from biopsy when properly carried out and the second detailing an innovative therapeutic modality that increases the intratumoral level of antineoplastic agents while minimizing body toxicity and side effects. The book also delves into congenital or acquired malformations of the brain, the skull base, and the cranial vault in three of its remaining chapters. Finally, the last chapter addresses the traumatic pathology of the spine, whose etiology and management have changed significantly in recent years.

Yaşargil, 2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series devoted to Advances and Technical Standards in Neurosurgery which was later sponsored by the European Association of Neurosurgical Societies. The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding. Therefore we have decided to publish all contributions in English regardless of the native language of the authors. All contributions are submitted to the entire editorial board before publication of any volume is not intended to compete with the publications of original Our series scientific papers in other neurosurgical journals. Our intention is rather to present fields of neurosurgery and related areas in which important recent

advances have been made The contributions are written by specialists in the given fields and constitute the first part of each volume In the second part of each volume we publish detailed descriptions of standard operative procedures furnished by experienced clinicians in these articles the authors describe the techniques they employ and explain the advantages difficulties and risks involved in the various procedures This part is intended primarily to assist young neurosurgeons in their post graduate training However we are convinced that it will also be useful to experienced fully trained neurosurgeons

Advances and Technical Standards in Neurosurgery L.
