Advances In Near Infrared Measurements:

Advances in Near-Infrared Measurements Gabor Patonay, 1998-12 This series aims to provide a basic insight into how NIR spectroscopy developed into an important general analytical tool in recent years *Advances in Near Infrared Spectroscopy and Related Computational Methods* Christian Huck, Krzysztof B. Bec, 2020-01-03 In the last few decades near infrared NIR spectroscopy has distinguished itself as one of the most rapidly advancing spectroscopic techniques. Mainly known as an analytical tool useful for sample characterization and content quantification, NIR spectroscopy is essential in various other fields, e.g. NIR imaging techniques in biophotonics, medical applications, or used for characterization of food products. Its contribution in basic science and physical chemistry should be noted as well, e.g. in exploration of the nature of molecular vibrations or intermolecular interactions. One of the current development trends involves the miniaturization and simplification of instrumentation, creating prospects for the spread of NIR spectrometers at a consumer level in the form of smartphone attachments, a breakthrough not yet accomplished by any other analytical technique. A growing diversity in the related methods and applications has led to a dispersion of these contributions among disparate scientific communities. The aim of this Special Issue was to bring together the communities that may perceive NIR spectroscopy from different perspectives. It resulted in 30 contributions presenting the latest advances in the methodologies essential in near infrared spectroscopy in a variety of applications. *Advanced Technologies for Physical Properties Measurement of Food and its Processing* Hao Lin, Lei Zhang, Quansheng Chen, Man Zhou, Leiqing Pan, Qin Ouyang, Solomon Yao-Say Selorm Adade, Yanyu Li, 2025-02-11 This book provides a comprehensive overview of the physical properties of foods and the cutting edge technologies employed to measure them. Delving into key topics such as optical, thermal, acoustic, rheological, and textural properties, it provides a detailed examination of principles, measurement methods, and applications in food quality evaluation. While it discusses advanced technologies such as near infrared spectroscopy, computer vision, spectral imaging, acoustic resonance analysis, electronic noses, tongues, eyes, and multi-sensor data fusion in detail, the book also introduces intelligent equipment design and real-time quality monitoring systems for the food industry, including emerging technologies like 4D printing and terahertz technology. The book also addresses critical questions about the application of these technologies in real-world scenarios, making it a must-read for those seeking to understand and apply the latest advancements in food science. This book is an invaluable resource for undergraduate and graduate students, researchers, and professionals in food science and engineering. It helps readers understand the principles of various non-destructive food quality measurement techniques and applies them to in situ evaluation and in field monitoring. It also serves as both a textbook and a reference guide, enabling readers to understand and apply advanced measurement and processing techniques for in situ evaluation and in field monitoring. By providing a thorough understanding of the principles and applications of food physical properties, this book ensures that its audience remains at the forefront of technological advancements in the field. The book contains several

chapters originally written in the Chinese language The translation was done with the help of artificial intelligence A subsequent human revision was done primarily in terms of content
