Duru, Jean H. Paul Paelinck, 2012-12-06 Econometrics of Health Care which we have sometimes called medico metrics is a field in full expansion The reasons are numerous our knowledge of quantitative relations in the field of health econometrics is far from being perfect a large number of analytical difficulties combining medical latent factors e g and economic facts spatial behaviour e g are faced by the research worker medical and pharmaceutical techniques change rapidly medical costs rocket more than proportionally with available resources of being tightened medical budgets are in the process So it is not surprising that the practice of hygieconometrics to produce a neologism is more and more included in the programmes of econometricians The Applied Econometrics Association has devoted to the topic two symposia in less than three years Lyons February 1983 Rotterdam December 1985 without experiencing any difficulties in getting valuable papers on econometrics of risks and medical insurance on the measurement of health status and of efficiency of medical techniques on general models allowing simulation These were the themes for the second meeting but other aspects of medical economic problems had presented themselves already to the analyst medical decision making and its consequences the behaviour of the actors patients and physicians regional medicometrics and what not some of them have been covered by the first meeting Finally in July 1988 took place in Lyons the Fourth International Conference on System Science in Health Care it should not be astonishing **Econometric Analysis of Health Data** Andrew M. Jones, Owen O'Donnell, 2002-05-17 Given extensive use of individual level data in Health Economics it has become increasingly important to understand the microeconomic techniques available to applied researchers The purpose of this book is to give readers convenient access to a collection of recent contributions that contain innovative applications of microeconomic methods to data on health and health care Contributions are selected from papers presented at the European Workshops on Econometrics and Health Economics and published in Health Economics Topics covered include Latent Variables Unobservable heterogeneity and selection problems Count data and survival analysis Flexible and
