conditions are required to provide both real time traveller information and successfully synchronise transit service planning and operations control Modelling Intelligent Multi Modal Transit Systems introduces the current trends in this newly emerging area Recent developments in information technology and telematics have enabled a large amount of data to become available thus further attracting transport researchers to set up new models outside the context of the traditional data driven approach The alternative demand supply interaction or network assignment modelling approach has improved greatly in recent years and has a crucial role to play in this new context

Going Underground Lara Langer Cohen, 2022-12-16 First popularized by newspaper coverage of the Underground Railroad in the 1840s the underground serves as a metaphor for subversive activity that remains central to our political vocabulary In *Going Underground* Lara Langer Cohen excavates the long history of this now familiar idea while seeking out versions of the underground that were left behind along the way Outlining how the underground's figurative sense first took shape through the associations of literal subterranean spaces with racialized Blackness she examines a vibrant world of nineteenth century US subterranean literature that includes Black radical manifestos anarchist periodicals sensationalist exposés of the urban underworld manuals for sex magic and the initiation rites of secret societies Cohen finds that the undergrounds in this literature offer sites of political possibility that exceed the familiar framework of resistance suggesting that nineteenth century undergrounds can inspire new modes of world making and world breaking for a time when this world feels increasingly untenable
