Cappellini, 2013-10-22 In the area of Digital Image Processing the new area of Time Varying Image Processing and Moving Object Recognition is contributing to impressive advances in several fields Presented in this volume are new digital image processing and recognition methods implementation techniques and advanced applications such as television remote sensing biomedicine traffic inspection and robotics New approaches such as digital transforms neural networks for solving 2 D and 3 D problems are described Many papers concentrate on motion estimation and recognition i e tracking of moving objects Overall the book describes the state of the art theory implementation applications of this developing area together with future trends The work will be of interest not only to researchers professors and students in university departments of engineering communications computers and automatic control but also to engineers and managers of industries concerned with computer vision manufacturing automation robotics and quality control **Robotics** Oliver Brock, Jeffrey C. Trinkle, Jeff Trinkle, Fabio Ramos, 2009 State of the art robotics research on such topics as manipulation motion planning micro robotics distributed systems autonomous navigation and mapping Robotics Science and Systems IV spans a wide spectrum of robotics bringing together researchers working on the foundations of robotics robotics applications and analysis of robotics systems This volume presents the proceedings of the fourth annual Robotics Science and Systems conference held in 2008 at the Swiss Federal Institute of Technology in Zurich The papers presented cover a range of topics including computer vision mapping terrain identification distributed systems localization manipulation collision avoidance multibody dynamics obstacle detection microrobotic systems pursuit evasion grasping and manipulation tracking spatial kinematics machine learning and sensor networks as well as such applications as autonomous driving and design of manipulators for use in functional MRI The conference and its

proceedings reflect not only the tremendous growth of robotics as a discipline but also the desire in the robotics community for a flagship event at which the best of the research in the field can be presented Visual Form C. Arcelli, L.P.

Cordella, G.S. di Baja, 2013-11-11 This book contains the papers presented at the International Workshop on Visual Form held in Capri Italy on May 27-30 1991. The workshop sponsored by the International Association for Pattern Recognition (IAPR) has been jointly organized by the Dipartimento di Informatica e Sistemistica of the University of Naples and the Istituto di Cibernetica of the National Research Council of Italy and has focussed on Shape. Shape is a distinctive feature of most patterns so that recognition can often be attained through shape discrimination. The organizers of the workshop shared the general feeling manifested by researchers that it was time for holding a meeting exclusively devoted to a feature so crucial for both human and machine perception. During this meeting problems and prospects in the field of 2D and 3D shape analysis could be discussed extensively so as to provide an effective updated picture of the current research activity in which shape plays a central role. Indeed many highly qualified researchers in the field positively reacted to the Call for Papers.
