McDaniel,Ken Pease,2021-02-25 This edited text draws together the insights of numerous worldwide eminent academics to

evaluate the condition of predictive policing and artificial intelligence AI as interlocked policy areas Predictive and AI technologies are growing in prominence and at an unprecedented rate Powerful digital crime mapping tools are being used to identify crime hotspots in real time as pattern matching and search algorithms are sorting through huge police databases populated by growing volumes of data in an effort to identify people liable to experience or commit crime places likely to host it and variables associated with its solvability Facial and vehicle recognition cameras are locating criminals as they move while police services develop strategies informed by machine learning and other kinds of predictive analytics Many of these innovations are features of modern policing in the UK the US and Australia among other jurisdictions AI promises to reduce unnecessary labour speed up various forms of police work encourage police forces to more efficiently apportion their resources and enable police officers to prevent crime and protect people from a variety of future harms However the promises of predictive and AI technologies and innovations do not always match reality They often have significant weaknesses come at a considerable cost and require challenging trade offs to be made Focusing on the UK the US and Australia this book explores themes of choice architecture decision making human rights accountability and the rule of law as well as future uses of AI and predictive technologies in various policing contexts The text contributes to ongoing debates on the benefits and biases of predictive algorithms big data sets machine learning systems and broader policing strategies and challenges Written in a clear and direct style this book will appeal to students and scholars of policing criminology crime science sociology computer science cognitive psychology and all those interested in the emergence of AI as a feature of contemporary policing

Handbook of Artificial Intelligence and Robotic Process Automation Al Naqvi, J. Mark Munoz, 2020-11-27 President Putin's explicit declaration that the country that makes progress in artificial intelligence will rule the world has launched a new race for dominance In this era of cognitive competition and total automation every country understands that it must rapidly adopt AI or go bust To stay competitive a country must have a strategy But how should a government proceed What areas it must focus on Where should it even start This book provides answers to these important yet pertinent questions and more Presenting the viewpoints of global experts and thought leaders on key issues relating to AI and government policies this book directs us to the future

Cognitive Science Jay Friedenberg, Gordon Silverman, 2011-07-14 In this Second Edition of their landmark text Authors Jay Friedenberg and Gordon Silverman survey significant theoretical models of the human mind from an interdisciplinary perspective Unlike other texts for this course which focus solely on classic experiments to illustrate major phenomena Cognitive Science introduces students to the theoretical models and ideas underlying such empirical work While experiments are discussed they are used primarily to illustrate the specific characteristics of a model This edition includes two new chapters on emotional cognition and social cognition
