An Introduction to Behavioral Endocrinology Randy Joe Nelson, 1995

Families without Fathers David Popenoe, 2017-07-12 The American family is changing Divorce single parents and stepfamilies are redefining the ways we live together and raise our children Many experts feel these seemingly inevitable changes should be celebrated they claim that the new families which often lack a strong father are actually healthier than traditional two parent families or at the very least do children no harm But as David Popenoe shows in Families Without Fathers this optimistic view is severely misguided Examining evidence from social

and behavioral science history and evolutionary biology Popenoe shows why fathers today are deserting their families in record numbers The disintegration of the child centered two parent family especially in the inner cities where as many as two in three children are growing up without their fathers and the weakening commitment of fathers to their children that more and more follows divorce are central causes of many of our worst individual and social problems Juvenile delinquency drug and alcohol abuse teenage pregnancy welfare dependency and child poverty can be directly traced to fathers lack of involvement in their children s lives Our situation will only get worse Popenoe warns unless men are willing to renew their commitment to their marriages and to their children Yet he is not just an alarmist He suggests concrete policies and new ways of thinking and acting that will help all fathers improve their marriages and family lives and tells us what we as individuals and as a society can do to support and strengthen the most important thing a man can do

Hormones, Brain and Behavior, 2002-06-18 *Hormones Brain and Behavior* Third Edition offers a state of the art overview of hormonally mediated behaviors including an extensive discussion of the effects of hormones on insects fish amphibians birds rodents and humans Entries have been carefully designed to provide a valuable source of information for students and researchers in neuroendocrinology and those working in related areas such as biology psychology psychiatry and neurology This third edition has been substantially restructured to include both foundational information and recent developments in the field Continuing the emphasis on interdisciplinary research and practical applications the book includes articles aligned in five main subject sections with new chapters included on genetic and genomic techniques and clinical investigations This reference provides unique treatment of all major vertebrate and invertebrate model systems with excellent opportunities for relating behavior to molecular genetics The topics cover an unusual breadth from molecules to ecophysiology ranging from basic science to clinical research making this reference of interest to a broad range of scientists in a variety of fields Contributors from 16 different countries and more than 70 institutions Unlike any other hormone reference on the market *Hormones Brain and Behavior* addresses hormone effects in all major vertebrate and non vertebrate models A timely current reference on an emerging field with each chapter providing an in depth exploration of the topic Discusses molecular aspects of hormone function systems development and hormone related diseases Addresses hormone effects in both the developing and adult nervous system Topics include Mammalian and Non mammalian Hormone behavior Systems Cellular and Molecular Mechanisms of Hormone Actions on Behavior Development of Hormone dependent Neuronal Systems Hormone Behavior Relations of Clinical Importance

Neuroendocrine Regulation of Mammalian Pregnancy and Lactation Paula J. Brunton, David R. Grattan, 2024-04-26 Adaptations to maternal physiology are required for a successful pregnancy outcome These changes are primarily orchestrated by the mother s brain and involve multiple neuroendocrine systems For this book the editors have gathered internationally recognized experts who have contributed to the major advances in our understanding of different aspects of the neuroendocrine regulation of mammalian pregnancy and lactation The book begins with a discussion of how pregnancy is recognized and maintained and the role of the placental hormones in supporting key adaptations required for a successful pregnancy The next few chapters focus on the neuroendocrine adaptations that occur during pregnancy in some key regulatory processes to ensure a sufficient supply of energy and nutrients protect the fetus from potentially harmful maternal stress hormones and prepare mammals for birth milk production lactation and motherhood Finally our current understanding of how the significant peripartum hormonal changes contribute to the mother s cognitive function and mood is examined This

book provides a broad overview of the finely orchestrated neuroendocrine adaptations that occur in pregnancy and lactation and discusses how such changes contribute to maximizing the likelihood of a positive outcome for mother and infant. Importantly the evidence for involvement of neuroendocrine dysregulation in some pregnancy related complications such as preterm birth and perinatal mood disorders is also highlighted. In addition to addressing fundamental mechanisms in the regulation of mammalian pregnancy and lactation the book includes the most recent advances in the field made possible by utilizing the latest innovative research technologies. Moreover it provides opinions on optimal experimental approaches, relates findings from experimental animal models with those from humans and outlines the direction and opportunities for future research in this arena. It is an essential resource for undergraduate students, postgraduate students and early career researchers embarking upon their journey in the fields of neuroendocrinology, endocrinology, reproductive biology or behavioural neuroscience. It also provides a valuable synopsis for established neuroendocrine researchers and educators, especially those whose interest transcends the nexus between neuroendocrinology and reproductive biology. This is the 15th volume in the International Neuroendocrine Federation (INF) Masterclass in Neuroendocrinology series which aims to illustrate the highest standards and to encourage the use of the latest technologies in basic research and hopes to provide inspiration for further exploration into the exciting field of neuroendocrinology.
