And Cites Commercially Exploited Fish Species Overexploitation:

The Use of CITES for Commercially-exploited Fish Species Solène Guggisberg, 2015-12-11 This book examines the legality adequacy and efficacy of using the Convention on International Trade in Endangered Species of Wild Fauna and Flora CITES for commercially exploited fish species and assesses whether the existing institutional cooperation with the Food and Agriculture Organization FAO and regional fisheries management organizations RFMOs is efficient This case study also provides an interesting lens to approaching wider international law issues Indeed finding ways to achieve effective governance of transboundary or global natural resources is central to the peaceful use of oceans and land Furthermore the role of science in advising decision makers is a sensitive issue which deserves scrutiny and is similar in many regimes Finally the complex problem of fragmentation of international law is acute in various fields of environmental law as in all rapidly developing areas of international regulations Strengthening International Fisheries Law in an Era of Changing Oceans

Richard Caddell, Erik J Molenaar, 2019-04-04 This collection addresses the central question of how the current international framework for the regulation of fisheries may be strengthened in order to meet the challenges posed by changing fisheries and ocean conditions in particular climate change International fisheries law has developed significantly since the 1990s through the adoption and establishment of international instruments and bodies at the global and regional levels Global fish stocks nevertheless remain in a troubling state and fisheries management authorities face a wide array of internal and external challenges including operational constraints providing effective management advice in the face of scientific uncertainty and non compliance by States with their international obligations This book examines these challenges and identifies options and pathways to strengthen international fisheries law While it has a primarily legal focus it also features significant contributions from specialists drawn from other disciplines notably fisheries science economics policy and international relations in order to provide a fuller context to the legal policy and management issues raised Rigorous and comprehensive in scope this will be essential reading for lawyers and non lawyers interested in international fisheries regulation in the context of profoundly changing ocean conditions **Implementing the Convention on International**

Trade in Endangered Species of Wild Fauna and Flora through national fisheries legal frameworks Nakamura, J.N. and Kuemlangan, B., 2020-11-11 An increasing number of commercially exploited and managed aquatic species has been listed in the Appendices to the Convention on International Trade in Endangered Species of Wild Fauna and Flora CITES triggering the attention from the fisheries sector of States on how listing would impact on the management of the relevant fisheries CITES regulates international trade in certain aquatic species including those which are and can be commercially exploited and which are being managed by the fisheries sector The fisheries sector legal frameworks will have to recognize and enable the various requirements provided for in CITES including the making of non detriment findings and ensuring that there is a designated management authority and scientific authority to take certain decisions in respect of listed

commercially exploited and managed aquatic species This sourcebook provides clarifications on the relationship of CITES with the fisheries sector and provides guidance on how national fisheries legal frameworks can optimize the implementation of CITES The realisation of this sourcebook in 2020 designated as a super year for nature and biodiversity represents a timely and useful contribution to fisheries management by i raising awareness of CITES ii enhancing comprehension of the CITES regime and its relationship with the fisheries sector and iii where a deliberate decision is made by a country to implement CITES through its national fisheries legal frameworks providing guidance as to what do it and how to do it

International Law of Sharks Erika J. Techera, Natalie Klein, 2017-04-18 In International Law of Sharks Erika J Techera and Natalie Klein provide an in depth analysis of the current legal frameworks that relate to these important species The authors offer ways in which to overcome obstacles that prevent existing laws from working better and identify best practice global governance options while highlighting opportunities for legal reform Scientific evidence indicates that sharks play a critical role in maintaining marine ecosystem health yet current governance regimes have not been effective and many shark species continue to diminish In this context effective laws are critical to improve sharks conservation status This volume also explores the broader relevance of oceans governance by identifying appropriate legal frameworks and regulatory mechanisms that balance conservation and utilisation of marine species in general

Governance of Marine Fisheries and Biodiversity Conservation Serge M. Garcia, Jake Rice, Anthony Charles, 2014-07-15 Governance of Marine Fisheries and Biodiversity Conservation explores governance of the world s oceans with a focus on the impacts of two inter connected but historically separate streams of governance one for fisheries the other for biodiversity conservation Chapters most co authored by leading experts from both streams investigate the interaction of these governance streams from ecological economic social and legal perspectives with emphasis on policies institutions processes and outcomes on scales from the global to the local community and with coverage of a range of themes and regions of the world The book opens with chapters setting the historical context for the two marine governance streams and framing the book s exploration of whether as the streams increasingly interact there will be merger or collision convergence or co evolution The concluding chapter synthesizes the insights from throughout the book relative to the questions posed in the opening chapters It also draws conclusions about future needs and directions in the governance of marine fisheries and biodiversity vital to the future of the world s oceans With cutting edge chapters written by many leading international experts in fisheries management and biodiversity conservation and edited by three leading figures in this crucially important subject Governance of Marine Fisheries and Biodiversity Conservation is an essential purchase for fisheries scientists economists resource managers and policymakers and all those working in fields of biodiversity conservation marine ecology and coastal livelihoods Libraries in all universities and research establishments where environmental and or marine studies conservation ocean policy and law biological and life sciences and fisheries management are studied and taught should have copies of this most important book
