The New Neighborhood Senior Center Joyce

Weil,2014-11-03 In 2011 seven thousand American baby boomers those born between 1946 and 1964 turned sixty five daily As this largest U S generation ages cities municipalities and governments at every level must grapple with the allocation of resources and funding for maintaining the quality of life health and standard of living for an aging population In *The New Neighborhood Senior Center* Joyce Weil uses in depth ethnographic methods to examine a working class senior center in Queens New York She explores the ways in which social structure directly affects the lives of older Americans and traces the role of political social and economic institutions and neighborhood processes in the decision to close such centers throughout the city of New York Many policy makers and gerontologists advocate a concept of aging in place whereby the communities in which these older residents live provide access to resources that foster and maintain their independence But all aging in place is not equal and the success of such efforts depends heavily upon the social class and availability of resources in any given community Senior centers expanded in part by funding from federal programs in the 1970s were designed as focal points in the provision of community based services However for the first wave of boomers the role of these centers has come to be questioned Declining government support has led to the closings of many centers even as the remaining centers are beginning to rebrand to attract the boomer generation However *The New Neighborhood Senior Center* demonstrates the need to balance what the boomers want from centers with the needs of frailer or more vulnerable elders who rely on the services of senior centers on a daily basis Weil challenges readers to consider what changes in social policies are needed to support or supplement senior centers and the functions they serve **Neighborhood** Emily Talen,2019 In an effort to make neighborhoods compatible with 21st century ideals Talen has produced a singular resource for understanding what is meant by neighborhood a multi dimensional comprehensive view of what neighborhoods signify how they re idealized and measured and what their historical progression has been Concepts in Urban Transportation Planning Mintesnot G. Woldeamanuel,2016-02-10 This book offers solutions for creating sustainable urban transportation Topics include historical developments planning policy and legislative initiatives nonmotorized and public transportation environmental and social justice issues and safety The author discusses social health and economic consequences of autocentric transportation and possible policy measures to address them The important topic of changing travel behavior is discussed Chapters contain straightforward concepts case studies review questions and ideas for class projects Instructors considering this book for use in a course may request an examination copy here
