Cryptocoding Based on Quasigroups Daniela Mechkaroska, Aleksandra Popovska-Mitrovikj, Verica Bakeva, 2024-01-12 This book presents the concept of cryptocoding which arises from the need to obtain secure and accurate transmission Therefore it is necessary to improve constantly existing and develop new algorithms that will ensure accurate and secure data transfer This leads to the intensive development of coding theory and cryptography as scientific fields which solve these problems To ensure efficient and secure data transmission at the same time the concept of cryptocoding is developed such that the coding and encryption processes are merged into one process Cryptocodes provide correction of a certain number of errors in the transmitted message and data confidentiality using only one algorithm The main research in this field is to define new algorithms for coding that detects and corrects errors random codes stream ciphers block ciphers pseudo random generators hash functions etc This monograph examines an application of quasigroups for designing error correcting cryptocodes called Random Codes Based on Quasigroups RCBQ These codes are a combination of cryptographic algorithms and error correcting

codes and depend on several parameters Some modifications new coding decoding algorithms of RCBQ for improving their performances for transmission ordinary messages images and audio files through a binary symmetric channel Gaussian channel and burst channels are considered Also authors propose and analyze filter for visually enhance of the decoded images and improving the quality of decoded audio files Sensors and Instrumentation, Aircraft/Aerospace, Energy Harvesting & Dynamic Environments Testing, Volume 7 Chad Walber, Patrick Walter, Steve Seidlitz, 2025-08-07 Sensors and Instrumentation Aircraft Aerospace and Energy Harvesting Volume 7 Proceedings of the 38th IMAC A Conference and Exposition on Structural Dynamics 2020 the seventh volume of eight from the Conference brings together contributions to this important area of research and engineering The collection presents early findings and case studies on fundamental and applied aspects of Shock Vibration Aircraft Aerospace Energy Harvesting Dynamic Environments Testing including papers on Alternative Sensing Acquisition Active Controls Instrumentation Aircraft Aerospace Aerospace Testing Techniques Energy Harvesting *Solar Energy Conversion And Photoenergy System - Volume I* Julian Blanco, Sixto Malato, 2009-10-29 Solar Energy Conversion and Photoenergy Systems theme in two volumes is a component of Encyclopedia of Energy Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty Encyclopedias Any human activity needs energy and renewable energies are always present all over the world Each location has its own specific renewable potential and it is our task to develop the suitable technologies to profit at local level this potential to not only produce the needed energy but also create economic activity and wealth Solar energy in particular has the highest potential among all existing renewable energies and in the context of the energy water and climate change global problems mankind will face in the coming years the substantial integration of solar energy technologies into our societies will an absolute needs in the short to medium term The number of applications of solar energy is simply huge covering a very wide range of human activities Some of these applications are already technically and economically viable being others still at research or demonstration level In addition it has been demonstrated the important benefits solar energy can provide to any area with medium high solar irradiation level from sustainability to energy independence as well as economic development and knowledge creation Due to this solar energy development from photovoltaic to solar thermal or power applications has been very intense during the last years in all the so called Sun Belt There is also the general consensus at many countries that we should accelerate the current solar energy pathway increasing the research efforts to make economically feasible the applications that today are only technically feasible This effort and the status of most of these applications have been discussed along this paper and within the articles of the topic The Theme on Solar Energy Conversion and Photoenergy Systems with contributions from distinguished experts in the field discusses solar energy related technologies and applications some of which are already in commercial and practical applications and others are under research and testing level The volumes provide an analysis and discussion about the reasons behind the current
