Army Technical Manual Tm 5 855 1:

Modern Protective Structures Theodor Krauthammer, 2008-02-01 In today's world reasonably predictable military operations have been replaced by low intensity conflicts less predictable terrorist activities carried out by determined individuals or small groups that possess a wide range of backgrounds and capabilities. Because of the threats posed by this evolving type of warfare civil engineers and emergency personnel face new challenges in designing facilities to protect lives and property and in conducting effective rescue operations and forensic investigations. Addressing these needs Modern Protective Structures develops realistic guidelines for the analysis design assessment retrofit and research of protected facilities. After introducing a comprehensive risk management approach the author provides a general background on explosive devices and their capabilities as well as explosive effects and the processes that generate them. He then discusses the effects of conventional and nuclear explosions. The book subsequently considers the significant design differences between conventional and nuclear loads and between existing design procedures and state of the art information from recent research. It also summarizes existing blast resistant design approaches and describes the dynamic responses of structural systems to blasts shocks and impacts. Additional coverage includes the behavior of specific structural connections the traditional concept of P I diagrams and progressive collapse. The book concludes with a systematic and balanced protective design approach. Tackling the analytical design assessment and hazard mitigation issues associated with short duration dynamic loads this book examines how impulsive loads affect various types of buildings and facilities. It provides the necessary material to help ensure the safety of persons assets and projects. *Monthly Catalog of United States Government Publications*, 1994 Monthly Catalogue, United States Public Documents, 1994 *Engineering Models In High-speed Penetration Mechanics And Their Applications (In 2 Volumes)* Gabi Ben-dor, Anatoly Dubinsky, Tov Elperin, 2018-12-28 This two volume 1100 pages 38 chapters book is a significantly expanded revised and updated version of the monograph by the authors published in 2013. Ben Dor G Dubinsky A Elperin T High Speed Penetration Dynamics Engineering Models and Methods Singapore World Scientific Publishing Company. The contents increased by 60% the number of titles in bibliography doubled and reached 1600 and the scope covers a range of new topics related to hypervelocity penetration along with high speed impact. Presented material is structured into two parts. The first part includes description and analysis of practically all known engineering models for calculating high speed penetration of projectiles into concrete metals geological shields adobe and gelatine. The second part focuses on the use of approximate models for solving conventional and non standard problems of penetration mechanics including prediction and optimization of protective properties of monolithic and multi layered shields against high speed projectiles and space debris shape optimization of high speed projectiles penetrating into various media modelling of penetration and optimal control of penetrators equipped with jet thrusters and investigation of the efficiency and optimization of segmented projectiles. The book includes comprehensive overviews on basic classes of

problems in high speed penetration mechanics This is a indispensable reference guide for scientists engineers and students specializing in the field of high speed and hypervelocity penetration mechanics
