Artificial Kidney Artificial Liver And Artificial Cells:

Artificial Kidney, Artificial Liver, and Artificial Cells T. Chang, 2012-12-06 There is a rapid increase in interest related to novel approaches in artificial kidneys artificial liver and detoxification Recent research has included the successful clinical applications of the principle of artificial cells for adsorbent hemoperfusion Since it is 20 years ago at McGill that the first report on Artificial Cells was presented I thought it might be useful to get together a small group of speakers and participants for a day before the ASAIO meeting to discuss some recent advances in the area of the clinical applications of artificial kidney artificial liver and artificial cells with emphasis on adsorbent hemoperfusion However the enthusiastic supports of distinguished speakers session chairmen and participants were such that the original projection of 100 participants had expanded to a preregistration total of 250 from Australia Canada England France Germany Israel Italy Japan The Netherlands Scotland Sweden and U S A The program also expanded to include a review section on hemodialysis dialysate regeneration hemofiltration resin hemoperfusion and oxystarch given by their respective originators The remaining of the symposium emphasizes the status of the art on different encapsulated adsorbent hemoperfusion approaches I would like to apologize to those who we could not accommodate because of space limitations It is hoped that this symposium volume may be useful for them and for others who are interested in this area Special thanks are due to Ms Joanne Toms for her excellent secretarial assistance for the conference and Mrs Artificial Cells Thomas Ming Swi Chang, 2007 This is the first book that provides a comprehensive review of the entire area of artificial cells The author a pioneer of the field invented the first artificial cells some 50 years ago and has continued to carry out active research in this field Since then there have been explosive research activities around the world on artificial cells especially in fields related to biotechnology nanomedicine cell therapy blood substitutes drug delivery and others However instead of the term artificial cells many authors use other terminologies such as blood substitutes bioencapsulation liposomes nanoparticles and so on Furthermore papers in this highly interdisciplinary area are published in numerous journals specializing in chemistry medicine surgery bioengineering and others while books in this area are mostly multi authored describing very specific and narrow areas As a result any meaningful literature search for a complete idea of the present status of the whole field of artificial cells is impossible This monograph is written to fill this gap by including all those areas in artificial cells that are disguised under different terminologies Each chapter begins with a detailed overview followed by detailed examples of the author's own research and a full description of his methods and procedures Readers interested in a detailed overview of the whole area can read from cover to cover omitting the methods section at the end of each chapter while those entering this area of research will find the detailed methods and procedures very useful Hemoperfusion, Plasmapheresis And Other Clinical Uses Of General, Biospecific, Immuno And Leucocyte Adsorbents Thomas Ming Swi Chang, Yoshihiro Endo, Volodymyr G Nikolaev, Tohru Tani, Yaoting Yu, Wen Hui Zheng, 2017-02-17 Written by 30 worldwide leading scientists experts and medical

doctors this comprehensive book provides a broad multi disciplinary overview on hemoperfusion The research of the subject was started by TMS Chang the pioneer and inventor of microcapsules who is well known as the the Father of Microcapsules The book presents the numerous recent developments in this field A series of tailor made toxin removing and cell separating adsorbents or microcapsules with unique properties have been designed prepared and produced for use in the treatment of diseases such as autoimmune disease drug over dose acute inflammation etc in which ordinary medical treatments shows little or no efficacy Various modalities of hemoperfusion treatments and results are described to provide readers with up to date information on the highly interdisciplinary field of hemoperfusion
