Astronomy in India, 1784-1876 Joydeep Sen, 2016-09-12 Indian scientific achievements in the early twentieth century are well known with a number of heralded individuals making globally recognized strides in the field of astrophysics. Covering the period from the foundation of the Asiatick Society in 1784 to the establishment of the Indian Association for the Cultivation of Science in 1876, Sen explores the relationship between Indian astronomers and the colonial British. He shows that from the mid nineteenth century Indians were not passive receivers of European knowledge but active participants in modern scientific observational astronomy. **Astronomy in India, 1784-1876** Joydeep Sen, 2015-10-06 Covering the period from the foundation of the Asiatick Society in 1784 to the establishment of the Indian Association for the Cultivation of Science in 1876, Sen explores the relationship between Indian astronomers and the colonial British. **A General History of Horology** Anthony John Turner, James Nye, Jonathan Betts, 2022 The text provides a general history of horology covering time keeping worldwide and at all periods throughout history from antiquity. Assyria and Egypt included to the present day.

Science on the Roof of the World Lachlan Fleetwood, 2022-05-12 An innovative global history of science, empire, and geography explaining how the Himalaya became the highest mountains in the world. *Evolutionary Theories and Religious Traditions* Bernard Lightman, Sarah Qidwai, 2023-11-21 Before the advent of radio, conceptions of the relationship between science and religion circulated through periodicals, journals, and books, influencing the worldviews of intellectuals and a wider public. In this volume, historians of science and religion examine that relationship through diverse mediums, geographic contexts, and religious traditions. Spanning within and beyond Europe and North America, chapters emphasize underexamined regions: New Zealand, Australia, India, Argentina, Sri Lanka, Egypt, and the Ottoman Empire, and major religions of the world, including Christianity, Hinduism, Buddhism, Confucianism, and Islam, interactions between those traditions, as well as atheism, monism, and agnosticism. As they focus on evolution and human origins, contributors draw attention to European scientists other than Darwin who played a significant role in the dissemination of evolutionary ideas; for some, those ideas provided the key to understanding every aspect of human culture, including religion. They also highlight central figures in national contexts, many of whom were not scientists who appropriated scientific theories for their own purposes. Taking a local, national, transnational, and global approach to the study of science and religion, this volume begins to capture the complexity of cultural engagement with evolution and religion in the long nineteenth century. **The Routledge Handbook of Science and Empire** Andrew Goss, 2021-07-05 The Routledge Handbook of Science and Empire introduces readers to important new research in the field of science and empire. This compilation of inquiry into the inextricably intertwined history of science and empire reframes the field, showing that one could not have grown without the other. The volume expands the history of science through careful attention to connections, exchanges, and networks beyond the scientific institutions of Europe and the United States. These 27 original essays by established scholars and new talent examine scientific and imperial disciplines.
