

Grids & Ground Lines

The package is built in a 100mm three-dimensional grid, which becomes the master vehicle grid system throughout the project's life. This XYZ grid is created by the intersections of a series of horizontal, longitudinal and lateral planes. The grid reference system is used as a reference between the CAD (computer-aided design) models (or drawings) and the clay models. The location of the vehicle components and section cutting planes are also referenced to the grid.

GRID ORIGIN POINT

- X = 0 The GRID ORIGIN POINT should be located out in front of the bumper and below the ground. Once created, it will always remain in the same place relative to the package. If the ground line is modified and pushed away from the body or the front fascia is moved forward, they will not move to a "minus" grid coordinate.
- Y = 0
- Z = 0
