Qian, 2016-11-03 Emphasizing the inductive nature of statistical thinking *Environmental and Ecological Statistics with R* Second Edition connects applied statistics to the environmental and ecological fields Using examples from published works in the ecological and environmental literature the book explains the approach to solving a statistical problem covering model specification parameter estimation and model evaluation It includes many examples to illustrate the statistical methods and presents R code for their implementation The emphasis is on model interpretation and assessment and using several core examples throughout the book the author illustrates the iterative nature of statistical inference The book starts with a description of commonly used statistical assumptions and exploratory data analysis tools for the verification of these assumptions It then focuses on the process of building suitable statistical models including linear and nonlinear models classification and regression trees generalized linear models and multilevel models It also discusses the use of simulation for model checking and provides tools for a critical

assessment of the developed models The second edition also includes a complete critique of a threshold model Environmental and Ecological Statistics with R Second Edition focuses on statistical modeling and data analysis for environmental and ecological problems By guiding readers through the process of scientific problem solving and statistical model development it eases the transition from scientific hypothesis to statistical model **A Primer of GIS, Second Edition** Francis

Carsten F. Dormann, Aaron M. Ellison, 2025-06-03 An accessible guide to understanding statistics using simulations with examples from a range of scientific disciplines Real world challenges such as small sample sizes skewed distributions of data biased sampling designs and more predictors than data points are pushing the limits of classical statistical analysis This textbook provides a new tool for the statistical toolkit data simulations It shows that using simulation and data generating models is an excellent way to validate statistical reasoning and to augment study design and statistical analysis with planning and visualization Although data simulations are not new to professional statisticians Statistics by Simulation makes the approach accessible to a broader audience with examples from many fields It introduces the reasoning behind data simulation and then shows how to apply it in planning experiments or observational studies developing analytical workflows deploying model diagnostics and developing new indices and statistical methods Covers all steps of statistical practice from planning projects to post hoc analysis and model checking Provides examples from disciplines including sociology psychology ecology economics physics and medicine Includes R code for all examples with data and code freely available online Offers bullet point outlines and summaries of each chapter Minimizes the use of jargon and requires only basic statistical background and skills [Handbook of Environmental and Ecological Statistics](#) Alan E. A. Hoeting, Richard Lyttleton Smith, 2019-01-15 This handbook focuses on the enormous literature applying statistical methodology and modelling to environmental and ecological processes The 21st century statistics community has become increasingly interdisciplinary bringing a large collection of modern tools to all areas of application in environmental processes In addition the environmental community has substantially increased its scope of data collection including observational data satellite derived data and computer model output The resultant impact in this latter community has been substantial no longer are simple regression and analysis of variance methods adequate The contribution of this handbook is to assemble a state of the art view of this interface Features An internationally regarded editorial team A distinguished collection of contributors A thoroughly contemporary treatment of a substantial interdisciplinary interface Written to engage both statisticians as well as quantitative environmental researchers 34 chapters covering methodology ecological processes environmental exposure and statistical methods in climate science

Introductory Fisheries Analyses with R Derek H. Ogle, 2018-09-03 A How To Guide for Conducting Common Fisheries Related Analyses in R Introductory Fisheries Analyses with R provides detailed instructions on performing basic fisheries stock assessment analyses in the R environment Accessible to practicing fisheries scientists as well as advanced undergraduate and graduate students the book demonstrates the flexibility and power of R offers insight into the reproducibility of script based analyses and shows how the use of R leads to more efficient and productive work in fisheries science The first three chapters present a minimal introduction to the R environment that builds a foundation for the fisheries specific analyses in the remainder of the book These chapters help you become familiar with R for basic fisheries analyses and graphics Subsequent chapters focus on methods to analyze age comparisons age length keys size structure weight length relationships condition abundance from capture recapture and depletion data mortality rates individual growth and the stock recruit relationship The fundamental statistical methods of linear regression analysis of variance ANOVA and nonlinear regression are demonstrated within the contexts of these common fisheries analyses For each analysis the author completely explains the R functions and provides sufficient background information so that you can confidently implement each method Web Resource The author's website at <http://derekogle.com> IFAR includes the data files and R code for each chapter enabling you to reproduce the results in the book as well as create your own scripts The site also offers supplemental code for more advanced analyses and practice exercises for every chapter

Quantitative Analysis of Marine Biological Communities Gerald J. Bakus, 2007-01-22 Quantitative methods specifically tailored for the marine biologist While there are countless texts

published on quantitative methods and many texts that cover quantitative terrestrial ecology this text fills the need for the special quantitative problems confronting marine biologists and biological oceanographers The author combines common quantitative techniques with recent advances in quantitative methodology and then demonstrates how these techniques can be used to study marine organisms their behaviors and their interactions with the environment Readers learn how to better design experiments and sampling employ sophisticated mathematical techniques and accurately interpret and communicate the results Most of this text is written at an introductory level with a few topics that advance to more complex themes Among the topics covered are plot plotless sampling biometrics experimental design game theory optimization time trends modeling and environmental impact assessments Even readers new to quantitative methods will find the material accessible with plenty of features to engage their interest promote learning and put their knowledge into practice One or more examples are provided to illustrate each individual quantitative technique presented in the text The accompanying CD ROM features two multimedia programs several statistical programs help to run complex statistical programs and additional information amplifying topics covered in the text References lead readers to additional information to pursue individual topics in greater depth Quantitative Analysis of Marine Biological Communities with its extensive use of examples is ideal for undergraduate and graduate students in marine biology Marine biologists regardless of their level of experience will also discover new approaches to quantitative analysis tailored to the particular needs of their field
