Ballou, David A. Briscoe, 2010-01-28 This impressive author team brings the wealth of advances in conservation genetics into the new edition of this introductory text including new chapters on population genomics and genetic issues in introduced and invasive species They continue the strong learning features for students main points in the margin chapter summaries vital support with the mathematics and further reading and now guide the reader to software and databases Many new references reflect the expansion of this field With examples from mammals birds reptiles fish amphibians plants and invertebrates this is an ideal introduction to conservation genetics for a broad audience The text tackles the quantitative aspects of conservation genetics and has a host of pedagogy to support students learning the numerical side of the subject Combined with being up to date its user friendly writing style and first class illustration programme forms a robust teaching package *A Practical Guide for Genetic Management of Fragmented Animal and Plant Populations* Richard Frankham, Jonathan D. Ballou, Katherine Ralls, Mark Derek Bruce Eldridge, Michele R. Dudash, Charles Barnet Fenster, Robert C. Lacy, Paul Sunnucks, 2019 The habitats of most species have been fragmented by

human actions isolating small populations that consequently develop genetic problems Millions of small isolated fragmented populations are likely suffering from inbreeding depression and loss of genetic diversity greatly increasing their risk of extinction Crossing between populations is required to reverse these effects but managers rarely do so A key reason for such inaction is that managers are often advised to manage populations in isolation whenever molecular genetic methods indicate genetic differences among them Following this advice will often doom small populations to extinction when the habitat fragmentation and genetic differences were caused by human activities A paradigm shift is required whereby evidence of genetic differentiation among populations is a trigger to ask whether any populations are suffering genetic problems and if so whether they can be rescued by augmenting gene flow Consequently there is now an urgent need for an authoritative practical guide to facilitate this paradigm shift in genetic management of fragmented populations

A Primer of Conservation Genetics Richard Frankham, 2003 Genetic Management of Fragmented Animal and Plant Populations

Richard Frankham, Jonathan D. Ballou, Katherine Ralls, Mark Derek Bruce Eldridge, Michele R. Dudash, Charles Barnet Fenster, Robert Cady Lacy, Paul Sunnucks, 2017 One of the greatest unmet challenges in conservation biology is the genetic management of fragmented populations of threatened animal and plant species More than a million small isolated population fragments of threatened species are likely suffering inbreeding depression and loss of evolutionary potential resulting in elevated extinction risks Although these effects can often be reversed by re establishing gene flow between population fragments managers very rarely do this On the contrary genetic methods are used mainly to document genetic differentiation among populations with most studies concluding that genetically differentiated populations should be managed separately thereby isolating them yet further and dooming many to eventual extinction Many small population fragments are going extinct principally for genetic reasons Although the rapidly advancing field of molecular genetics is continually providing new tools to measure the extent of population fragmentation and its genetic consequences adequate guidance on how to use these data for effective conservation is still lacking This accessible authoritative text is aimed at senior undergraduate and graduate students interested in conservation biology conservation genetics and wildlife management It will also be of particular relevance to conservation practitioners and natural resource managers as well as a broader academic audience of conservation biologists and evolutionary ecologists

How Evolution Shapes Our Lives

Jonathan B. Losos, Richard E. Lenski, 2016-07-26 It is easy to think of evolution as something that happened long ago or that occurs only in nature or that is so slow that its ongoing impact is virtually nonexistent when viewed from the perspective of a single human lifetime But we now know that when natural selection is strong evolutionary change can be very rapid In this book some of the world's leading scientists explore the implications of this reality for human life and society With some twenty five essays this volume provides authoritative yet accessible explorations of why understanding evolution is crucial to human life from dealing with climate change and ensuring our food supply health and economic survival to

developing a richer and more accurate comprehension of society culture and even what it means to be human itself
Combining new essays with ones revised and updated from the acclaimed Princeton Guide to Evolution this collection
addresses the role of evolution in aging cognition cooperation religion the media engineering computer science and many
other areas The result is a compelling and important book about how evolution matters to humans today The contributors
include Francisco J Ayala Dieter Ebert Elizabeth Hannon Richard E Lenski Tim Lewens Jonathan B Losos Jacob A Moorad
Mark Pagel Robert T Pennock Daniel E L Promislow Robert C Richardson Alan R Templeton and Carl Zimmer **American**
