Autodyn Theory Manual:

Godunov Methods E.F. Toro, 2012-12-06 This edited review book on Godunov methods contains 97 articles all of which were presented at the international conference on Godunov Methods Theory and Applications held at Oxford in October 1999 to commemorate the 70th birthday of the Russian mathematician Sergei K Godunov. The meeting enjoyed the participation of 140 scientists from 20 countries; one of the participants commented everyone is here meaning that virtually everybody who had made a significant contribution to the general area of numerical methods for hyperbolic conservation laws along the lines first proposed by Godunov in the fifties was present at the meeting. Sadly there were important absentees who due to personal circumstance could not attend this very exciting gathering. The central theme of the meeting and of this book was numerical methods for hyperbolic conservation laws following Godunov's key ideas contained in his celebrated paper of 1959. But Godunov's contributions to science are not restricted to Godunov's method.

Computational Plasticity Mao-Hong Yu, Jian-Chun Li, 2012-12-02 Computational Plasticity with Emphasis on the Application of the Unified Strength Theory explores a new and important branch of computational mechanics and is the third book in a plasticity series published by Springer. The other two are Generalized Plasticity Springer Berlin 2006 and Structural Plasticity Springer and Zhejiang University Press Hangzhou 2009. This monograph describes the unified strength theory and associated flow rule, the implementation of these basic theories in computational programs and shows how a series of results can be obtained by using them. The unified strength theory has been implemented in several special nonlinear finite element programs and commercial Finite Element Codes by individual users and corporations. Many new and interesting findings for beams, plates, underground caves, excavations, strip foundations, circular foundations, slop, underground structures of hydraulic power stations, pumped storage power stations, underground mining, high velocity penetration of concrete structures, ancient structures and rocket components along with relevant computational results are presented. This book is intended for graduate students, researchers and engineers working in solid mechanics, engineering and materials science. The theories and methods provided in this book can also be used for other computer codes and different structures. More results can be obtained which put the potential strength of the material to better use, thus offering material saving and energy saving solutions. Mao Hong Yu is a professor at the Department of Civil Engineering at Xi'an Jiaotong University, Xi'an, China.

Structural Failure and Plasticity X.L. Zhao, R.H. Grzebieta, 2000-10-04 As mankind continues to push back the boundaries and begins to explore other worlds and the ocean depths, a thorough understanding of how structures behave when subjected to extremes in temperature, pressure and high loading rates will be essential. This symposium provided the perfect forum for presenting research into structures subjected to such extreme loads. There were a large number of papers presented under topics of impact, blast and shock loading, indicating a strong research interest in high rates of loading. Similarly, new topics have been added to the traditional symposium list such as fire loading, earthquake loading and fatigue.

and connection failures It is clear now that fundamental knowledge of plastic deformation of structures to various extreme loads is coming of age Each full paper was peer reviewed by at least two experts in the field

Software and Intelligent Sciences: New Transdisciplinary Findings Wang, Yingxu, 2012-03-31 The junction of software development and engineering combined with the study of intelligence has created a bustling intersection of theory design engineering and conceptual thought Software and Intelligent Sciences New Transdisciplinary Findings sits at a crossroads and informs advanced researchers students and practitioners on the developments in computer science theoretical software engineering cognitive science cognitive informatics and intelligence science The crystallization of accumulated knowledge by the fertilization of these areas have led to the emergence of a transdisciplinary field known as software and intelligence sciences to which this book is an important contribution and a resource for both fields alike

High Performance and Optimum Design of Structures and Materials V S. Hernandez, G. Schleyer, 2022-09-13 The use of novel materials and new structural concepts nowadays is not restricted to highly technical areas like aerospace aeronautical applications or the automotive industry but affects all engineering fields including those such as civil engineering and architecture The included contributions highlight the latest developments in design and manufacturing Most high performance structures require the development of a generation of new materials which can more easily resist a range of external stimuli or react in a non conventional manner Particular emphasis is placed on intelligent structures and materials as well as the application of computational methods for their modelling control and management The book also addresses the topic of design optimisation Contributions cover numerical methods different optimisation techniques and new software Optimisation problems include those related to the size shape and topology of structures and materials Optimisation techniques have much to offer to those involved in the design of new industrial products as the appearance of powerful commercial computer codes has created a fertile field for the incorporation of optimisation in the design process of all engineering disciplines The performance of structures under shock and impact loads is another area covered The increasing need to protect civilian infrastructure and industrial facilities against unintentional loads arising from accidental impact and explosion events as well as terrorist attacks is reflected in the sustained interest worldwide While advances have been made in recent decades many challenges remain such as developing more effective and efficient blast and impact mitigation approaches or assessing the uncertainties associated with large and small scale testing and validation of numerical and analytical models The overall aim is to move towards a better understanding of the critical issues relating to the testing behaviour modelling and analyses of protective structures against blast and impact loading The studies contained in this volume were presented at the International Conference on High Performance and Optimum Structures and Materials Encompassing Shock and Impact Loading and address issues involving advanced types of structures particularly those based on new concepts and shock and impact resistance
