The introduction is followed by an in depth investigation of carbon based nanomaterials which are as important to nanotechnology as silicon is to electronics. However it goes beyond the usual discussion of nanotubes and nanofibers to consider graphite whiskers, cones and polyhedral crystals and nanocrystalline diamonds. It also provides significant new information with regard to nanostructured semiconductors, ceramics, metals, biomaterials and polymers as well as nanotechnology's application in drug delivery systems, bioimplants and field emission displays. The Nanomaterials Handbook is edited by world renowned nanomaterials scientist Yury Gogotsi who has recruited his fellow pioneers from academia, national laboratories and industry to provide coverage of the latest material developments in America, Asia, Europe and Australia.
