Advanced Time Correlated Single Photon Counting Techniques Springer Series In Chemical Physics:

Advanced Time-Correlated Single Photon Counting Techniques Wolfgang Becker, 2005-12-19 In 1984 Desmond O Connor and David Phillips published their comprehensive book Time correlated Single Photon Counting At that time time correlated single photon counting or TCSPC was used primarily to record fluorescence decay functions of dye solutions in cuvettes From the beginning TCSPC was an amazingly sensitive and accurate technique with excellent time resolution However acquisition times were relatively slow due to the low repetition rate of the light sources and the limited speed of the electronics of the 70s and early 80s Moreover TCSPC was intrinsically one dimensional i.e. limited to the recording of the waveform of a periodic light signal Even with these limitations it was a wonderful technique More than 20 years have elapsed and electronics and laser techniques have made impressive progress The number of transistors on a single chip has approximately doubled every 18 months resulting in a more than 1 000 fold increase in complexity and speed The repetition rate and power of pulsed light sources have increased by about the same factor *Advanced Time-Correlated Single Photon Counting Applications* Wolfgang Becker, 2015-04-13 This book is an attempt to bridge the gap between the instrumental principles of multi dimensional time correlated single photon counting TCSPC and typical applications of the technique Written by an originator of the technique and by successful users it covers the basic principles of the technique its interaction with optical imaging methods and its application to a wide range of experimental tasks in life sciences and clinical research The book is recommended for all users of time resolved detection techniques in biology bio chemistry spectroscopy of live systems live cell microscopy clinical imaging spectroscopy of single molecules and other applications that require the detection of low level light signals at single photon sensitivity and picosecond time resolution **Advanced Photon Counting** Peter Kapusta, Michael Wahl, Rainer Erdmann, 2015-04-23 This volume focuses on Time Correlated Single Photon Counting TCSPC a powerful tool allowing luminescence lifetime measurements to be made with high temporal resolution even on single molecules Combining spectrum and lifetime provides a fingerprint for identifying such molecules in the presence of a background Used together with confocal detection this permits single molecule spectroscopy and microscopy in addition to ensemble measurements opening up an enormous range of hot life science applications such as fluorescence lifetime imaging FLIM and measurement of Förster Resonant Energy Transfer FRET for the investigation of protein folding and interaction Several technology related chapters present both the basics and current state of the art in particular of TCSPC electronics photon detectors and lasers The remaining chapters cover a broad range of applications and methodologies for experiments and data analysis including the life sciences defect centers in diamonds super resolution microscopy and optical tomography The chapters detailing new options arising from the combination of classic TCSPC and fluorescence lifetime with methods based on intensity fluctuation represent a particularly unique highlight *Spectroscopy and Dynamics of Single Molecules*, 2019-08-14 *Spectroscopy and Dynamics of Single Molecules Methods and Applications*

reviews the most recent developments in spectroscopic methods and applications Spectroscopic techniques are the chief experimental methods for testing theoretical models and research in this area plays an important role in stimulating new theoretical developments in physical chemistry This book provides an authoritative insight into the latest advances in the field highlighting new techniques current applications and potential future developments An ideal reference for chemists and physicists alike Spectroscopy and Dynamics of Single Molecules Methods and Applications is a useful guide for all those working in the research design or application of spectroscopic tools and techniques across a wide range of fields Includes the latest research on ultrafast vibrational and electronic dynamics nonlinear spectroscopies and single molecule methods Makes the content accessible to researchers in chemistry biophysics and chemical physics through a rigorous multi disciplinary approach Provides content edited by a world renowned chemist with more than 30 years of experience in research and instruction
