Advances in Fresh-Cut Fruits and Vegetables Processing Olga

Martin-Belloso,Robert Soliva Fortuny,2010-10-21 Despite a worldwide increase in demand for fresh cut fruit and vegetables in many countries these products are prepared in uncontrolled conditions and have the potential to pose substantial risk for consumers Correspondingly researchers have ramped up efforts to provide adequate technologies and practices to assure product safety while keeping n **Conventional and Advanced Food Processing Technologies** Suvendu

Bhattacharya,2014-09-26 Food processing technologies are an essential link in the food chain These technologies are many and varied changing in popularity with changing consumption patterns and product popularity Newer process technologies are also being evolved to provide the added advantages Conventional and Advanced Food Processing Technologies fuses the practical application machinery theoretical model equation and cutting edge recent trends making it ideal for industrial academic and reference use It consists of two sections one covering conventional or well established existing processes and the other covering emerging or novel process technologies that are expected to be employed in the near future for the processing of foods in the commercial sector All are examined in great detail considering their current and future applications with added examples and the very latest data Conventional and Advanced Food Processing Technologies is a comprehensive treatment of the current state of knowledge on food processing technology In its extensive coverage and the selection of reputed research scientists who have contributed to each topic this book will be a definitive text in this field for students food professionals and researchers *Advances in Postharvest and Analytical Technology of Horticulture Crops*

Monika Thakur,Tarun Belwal,2024-11-21 This book discusses advances in postharvest and analytical technology for

horticulture crops and challenges to meet future needs The horticulture crops fruits and vegetables need a systematic and scientific postharvest handling and management system for securing both physical and chemical attributes while prolonging their shelf life Postharvest technologies include storage drying packaging extraction of components and preparation of juice and wine from the collected fruits and vegetables All these postharvest technologies have emerged and evolved with time to provide meaningful solutions to minimize food loss maintain quality and provide fast processing of horticulture crops Parallel development of analytical techniques has also evolved to monitor the quality of fruits and vegetables during postharvest processing and thus provide a rapid and efficient method for delivering safer food products This book provides an overview of different postharvest technologies their mechanisms and their effect on the quality of horticulture crops It also emphasizes the assessment of each advanced technology including its limitations and advantages Overall this book provides techniques research mechanisms advances and challenges of postharvest and analytical technologies for horticulture crops along with recommendations for future research directions

Advances in Cereals Processing Technologies Gopal Kumar Sharma, Anil Dutt Semwal, Dev Kumar Yadav, 2021-12-22 The present book presents its reader with comprehensive knowledge related to cereals processing It is imperative to have sound knowledge of food laws and regulations with an Indian perspective as these play a pivotal role in commercializing food products as well as fresh produce which are aptly covered in this book It includes recent trends in technology of cereals based products technological updates in legumes and pulses based convenience processed foods various aspects of evolution of bakery and confectionery technology and technological evaluation of milling Since age s process of fermentation was employed for preserving the cereals based food by using general and specified micro flora and micro fauna the science and technology involved is well explained in the chapter titled Fermented Food Based on Cereal and Pulses The most important quality attributes related to cereals processing are rheological and thermal changes which occur when extrinsic factors such as moisture and temperature are ebb and flow This subject was sensibly covered under Rheological and Thermal Changes Occurring During Processing Sugarcane and the sugar industry have the largest contribution to the industrial development Various unit operations and technology involved are explained as recent updates in sugar honey jaggery and salt processing Shelf life stability of the products with respect to various chemical parameters attributed to the oxidative changes in processed foods is also aptly covered Note T F does not sell or distribute the hardback in India Pakistan Nepal Bhutan Bangladesh and Sri Lanka This title is co published with NIPA

Advanced Research Methods in Food Processing Technologies Junaid Ahmad Malik, Megh R. Goyal, Preeti Birwal, Ritesh B. Watharkar, 2024-02-06 This new volume presents new studies and research cases on advanced technologies for food processing and preservation to maintain and improve food quality extend shelf life and provide new solutions to food processing challenges The volume discusses cold plasma and ultrasound processing of foods introducing new food processing technologies and applications It also elaborates on microwave processing of foods describing applications potential and

intermittent microwave drying of fruits Other new research focusses on high pressure processing electrospraying technology in foods encapsulation techniques impact of freezing and thawing processes on textural properties of food products 3D printing of foods enzyme linked immunosorbent assay ELISA in food authentication and state of the art applications of nanotechnology in food processing

Non-Thermal Processing Technologies for the Fruit and Vegetable Industry M. Selvamuthukumar, 2022-11-02 Fruits and vegetables rapidly spoil due to growth of microorganisms which further render them unsafe for human consumption The traditional methods of food preservation which involves drying canning salting curing and chemical preservation can significantly affect food quality by diminishing nutrients during heat processing This can alter the texture of the products leave chemical residues in the final processed products which in turn has greater impact over consumers safety and health concerns To combat this problem various current non thermal food processing techniques can be employed in fruit and vegetable processing industries to enhance consumer satisfaction for delivering wholesome food products to the market thus increasing demand Non Thermal Processing Technologies for the Fruit and Vegetable Industry introduces the various non thermal food processing techniques especially employed for fruits and vegetables processing industries it deals with the effect of several non thermal processing techniques on quality aspects of processed fruits and vegetable products and keeping quality and consumer acceptability Key Features Describes the high pressure processing techniques employed for processing fruit and vegetable based beverages Discusses the safety aspects of using various innovative non thermal based technologies for the fruits and vegetables processing industries Explains ozone application cold plasma ultrasound and UV irradiation for fruits and vegetables with their advantages disadvantages process operations mechanism for microbes in activation etc Presents the commercially viable and economically feasible non thermal processing technologies for fruit and vegetable industry This book addresses professors scientists food engineers research scholars students and industrial personnel for stability enhancement of fruit and vegetable based food products by using novel non thermal food processing techniques Readers will come to know the current and emerging trends in use of non thermal processing techniques for its application in several fruit and vegetable based food processing industries

Sustainable Postharvest Technologies for Fruits and Vegetables Sajid Ali, Shabir Ahmad Mir, B.N. Dar, Shaghef Ejaz, 2024-08-30 Fruits and vegetables commonly termed as fresh produce are an important component of the human diet as these provide various beneficial and essential health related compounds Nevertheless fresh produce is susceptible to postharvest deterioration and decay along with loss of certain nutrients due to inappropriate storage conditions and lack of standard postharvest technologies In addition the short shelf life is considered another major constraint that must be extended after harvest to ensure a wider availability window of the fresh produce for consumers From this perspective the use of postharvest approaches is considered imperative to reduce the deterioration of harvested fresh produce in order to extend their storage and shelf life potential on a sustainable basis Sustainable Postharvest Technologies for Fruits and Vegetables

covers various aspects of postharvest technologies with major developments over the recent past and provides a way forward for the future. The sustainable use of various technologies and elicitors could be adapted from farm to fork in order to conserve the eating quality of fresh produce. Therefore, this book covers various sustainable postharvest treatments and technologies that could be considered highly effective for the delay of postharvest senescence and deterioration. Among the various technologies, the use of preharvest treatments, controlled atmosphere, dynamic control atmosphere, modified atmosphere, and hypobaric conditions has tremendous potential for the fresh fruits and vegetables industry. In the same way, cold plasma, pulsed light, ultraviolet light, ultrasound technology, nanoemulsions, nano packaging, electrolyzed water, high pressure processing, ozone gas irradiations, edible coatings, vacuum packaging, and active packaging with slow releasing compounds along with nanotechnology are highly practicable and possesses tremendous potential to be used in the maintenance of overall eating quality and storage life extension of the fresh produce. Key Features: Overviews the major factors affecting postharvest physiology and shelf life potential of fresh produce. Focuses on major sustainable technologies having the potential to maintain postharvest quality and extend shelf life of fruits and vegetables. Describes practical and recent advances of various approaches indispensable for the maintenance of overall eating quality and food safety attainment for fresh produce on a sustainable basis. Covers how quality maintenance and shelf life rely on preharvest practices, nonthermal treatments, storage atmospheres, packaging materials, active packaging, edible packaging, coating application techniques, nanotechnology, and ecofriendly plant extracts and natural antagonists.
