

The background of the cover is a microscopic image showing various types of bacteria. There are numerous small, round, purple-stained cocci, some appearing in pairs or small clusters. There are also larger, more irregular, and elongated structures, possibly representing different bacterial species or stages of growth. The overall color palette is dominated by shades of purple and blue, with some lighter areas where the bacteria are more concentrated.

Microbes S. K. Soni, 2007

Microorganisms are ubiquitous and indispensable for the existence of mankind. They show diversity in size, shape, metabolism, and the range of positive functions they perform for sustaining life on this planet. Bacteria have been exploited by mankind since times immemorial for the production of various foods and enzymes. They reveal several types of metabolic reactions which are absent in eukaryotic organisms. The present book highlights the potential of microorganisms in solving the global energy crisis. Presently, the world is facing an energy crisis due to depleting fossil fuels which are expected to get exhausted during the next 50 years. One of the alternative energy resources for the new millennium is expected to be renewable energy, including biomass, from which a variety of biofuels can be obtained by the exploitation of microbes. This volume has been organized in 13 chapters which have been prepared to provide the readers with both an in-depth study and a broad perspective of microorganisms for the sustainability of mankind. Further, it makes the readers familiar with the diversity in energy-generating pathways among different groups of microorganisms and different types of biomass energy resources available on this planet and the various possibilities which can be exploited for converting these into alternate energy sources with the help of microbes. A great effort has been made to provide the readers a comprehensive knowledge about different alternative fuels and value-added products from microbes for the 21st century. It is hoped that this volume will prove useful to the students and professionals who are pursuing their career in Microbiology, Biotechnology, Biochemistry, Environmental sciences, and Energy studies related to the alternate biofuels to solve the global energy crisis.
