

The background of the cover is a microscopic image showing various types of bacteria. There are numerous small, round, purple-stained cocci, some appearing in pairs or small clusters. There are also larger, more irregular, and elongated structures, possibly representing different bacterial species or stages of growth. The overall color palette is dominated by shades of purple and blue, with some lighter areas where the bacteria are more concentrated.

Sustainability Marina G. and hydrogen comes with an exceptionally large environmental footprint To meet goals of long term sustainability and human well being all areas of energy chemicals agriculture waste management industries must go beyond short term economic considerations and target both large and small methane emissions The search for new environment friendly approaches for methane capture and valorization is an ongoing journey While it is not yet apparent which innovation might represent the best solution it is evident that methane biocatalysis is one of the most promising paths Microbes are gatekeepers of fugitive methane in Nature Methane consuming microbes are typically small in number but exceptionally big in their impact on the natural carbon cycle They control and often completely eliminate methane emission from a variety of biological and geothermal sources The tremendous potential of these microbial systems is only now being implemented in human made systems The book addresses professors researchers and graduate students from both academia and industry working in microbial biotechnology molecular biology and chemical engineering
