Bioreactor Systems for Tissue Engineering Cornelia Kasper, Martijn van Griensven, Ralf Pörtner, 2009-02-03 The editors of this special volume would first like to thank all authors for their excellent contributions We would also like to thank Prof Dr Thomas Scheper Dr Marion Hertel and Ulrike Kreusel for providing the opportunity to compose this volume and Springer for organizational and technical support Tissue engineering represents one of the major emerging fields in modern b technology it combines different subjects ranging from biological and material sciences to engineering and clinical disciplines The aim of tissue engineering is the development of therapeutic approaches to substitute diseased organs or tissues or improve their function Therefore three dimensional biocompatible materials are seeded with cells and cultivated in suitable systems to generate functional tissues Many different aspects play a role in the formation of 3D tissue structures In the first place the source of the used cells is of the utmost importance To prevent tissue rejection or immune response preferentially autologous cells are now used In particular stem cells from different sources are gaining exceptional importance as they can be differentiated into different tissues by using special media and supplements In the field of biomaterials numerous scaffold materials already exist but new composites are also being developed based on polymeric natural or xenogenic sources Moreover a very important issue in tissue engineering is the formation of tissues under well defined controlled and reproducible conditions Therefore a substantial number of new bioreactors have been developed Bioreactors for Tissue Engineering

Julian Chaudhuri, Mohamed Al-Rubeai, 2006-01-16 For the first time in a single volume the design characterisation and operation of the bioreactor system in which the tissue is grown is detailed Bioreactors for Tissue Engineering presents an overall picture of the current state of knowledge in the engineering of bioreactors for several tissue types bone cartilage vascular addresses the issue of mechanical conditioning of the tissue and describes the use of techniques such as MRI for monitoring tissue growth This unique volume is dedicated to the fundamentals and application of bioreactor technology to tissue engineering products Not only will it appeal to graduate students and experienced researchers in tissue engineering and regenerative medicine but also to tissue engineers and culture technologists academic and industrial chemical engineers biochemical engineers and cell biologists who wish to understand the criteria used to design and develop novel systems for tissue growth in vitro **Tissue Engineering** Bernhard Palsson, Jeffrey A. Hubbell, Robert Plonsey, Joseph D.
