Advanced Topics in Bisimulation and Coinduction Davide Sangiorgi, Jan Rutten, 2011-10-13 Coinduction is a method for specifying and reasoning about infinite data types and automata with infinite behaviour In recent years it has come to play an ever more important role in the theory of computing It is studied in many disciplines including process theory and concurrency modal logic and automata theory Typically coinductive proofs demonstrate the equivalence of two objects by constructing a suitable bisimulation relation between them This collection of surveys is aimed at both researchers and Master's students in computer science and mathematics and deals with various aspects of bisimulation and coinduction with an emphasis on process theory Seven chapters cover the following topics history algebra and coalgebra algorithmics logic higher order languages enhancements of the bisimulation proof method and probabilities Exercises are also included to help the reader master new material Advanced Topics in Bisimulation and Coinduction Davide Sangiorgi, J. SEFM 2024 Collocated Workshops José Proença, Raul Fervari, Manuel A. Martins, Reinhard Kahle, Graham Pluck, 2025-09-12 This volume constitutes the papers of two workshops which were held in conjunction with the 22nd International Workshop on Software Engineering and Formal Methods SEFM 2024 Collocated Workshops held in Aveiro Portugal during November 4 5 2024 The 20 full papers presented in this book were carefully reviewed and selected from 36 submissions SEFM 2024 Collocated Workshops presents the following two workshops ReacTS 2024 International Workshop on Reconfigurable Transition Systems Semantics Logics and Applications CIFMA 2024 6th International Workshop on Cognition Interdisciplinary Foundations Models and Applications **Temporal Logics in Computer Science** Stéphane Demri, Valentin Goranko, Martin Lange, 2016-10-13 This comprehensive text provides a modern and technically precise exposition of the fundamental theory and applications of temporal logics in computer science Part I presents the basics of discrete transition systems including constructions and behavioural equivalences Part II examines the most important temporal logics for transition systems and Part III looks at their expressiveness and complexity Finally Part IV describes the main computational methods and decision procedures for model checking and model building based on tableaux automata

and games and discusses their relationships The book contains a wealth of examples and exercises as well as an extensive annotated bibliography Thus the book is not only a solid professional reference for researchers in the field but also a comprehensive graduate textbook that can be used for self study as well as for teaching courses **Modeling and Analysis** of Communicating Systems Jan Friso Groote, Mohammad Reza Mousavi, 2023-05-09 Rigorous theory and real world applications for modeling and analysis of the behavior of complex communicating computer systems Complex communicating computer systems computers connected by data networks and in constant communication with their environments do not always behave as expected This book introduces behavioral modeling a rigorous approach to behavioral specification and verification of concurrent and distributed systems It is among the very few techniques capable of modeling systems interaction at a level of abstraction sufficient for the interaction to be understood and analyzed Offering both a mathematically grounded theory and real world applications the book is suitable for classroom use and as a reference for system architects The book covers the foundation of behavioral modeling using process algebra transition systems abstract data types and modal logics Exercises and examples augment the theoretical discussion The book introduces a modeling language mCRL2 that enables concise descriptions of even the most intricate distributed algorithms and protocols Using behavioral axioms and such proof methods as confluence cones and foci readers will learn how to prove such algorithms equal to their specifications Specifications in mCRL2 can be simulated visualized or verified against their requirements An extensive mCRL2 toolset for mechanically verifying the requirements is freely available online this toolset has been successfully used to design and analyze industrial software that ranges from healthcare applications to particle accelerators at CERN Appendixes offer material on equations and notation as well as exercise solutions **Formal Methods for** Software Engineering Markus Roggenbach, Antonio Cerone, Bernd-Holger Schlingloff, Gerardo Schneider, Siraj Ahmed Shaikh, 2022-06-22 Software programs are formal entities with precise meanings independent of their programmers so the transition from ideas to programs necessarily involves a formalisation at some point The first part of this graduate level introduction to formal methods develops an understanding of what constitutes formal methods and what their place is in Software Engineering It also introduces logics as languages to describe reasoning and the process algebra CSP as a language to represent behaviours The second part offers specification and testing methods for formal development of software based on the modelling languages CASL and UML The third part takes the reader into the application domains of normative documents human machine interfaces and security Use of notations and formalisms is uniform throughout the book Topics and features Explains foundations and introduces specification verification and testing methods Explores various application domains Presents realistic and practical examples illustrating concepts Brings together contributions from highly experienced educators and researchers Offers modelling and analysis methods for formal development of software Suitable for graduate and undergraduate courses in software engineering this uniquely practical textbook will also be of value to

students in informatics as well as to scientists and practical engineers who want to learn about or work more effectively with formal theories and methods Markus Roggenbach is a Professor in the Dept of Computer Science of Swansea University Antonio Cerone is an Associate Professor in the Dept of Computer Science of Nazarbayev University Nur Sultan Bernd Holger Schlingloff is a Professor in the Institut f r Informatik of Humboldt Universit t zu Berlin Gerardo Schneider is a Professor in the Dept of Computer Science and Engineering of University of Gothenburg Siraj Ahmed Shaikh is a Professor in the Institute for Future Transport and Cities of Coventry University The companion site for the book offers additional resources including further material for selected chapters prepared lab classes a list of errata slides and teaching material and virtual machines with preinstalled tools and resources for hands on experience with examples from the book The URL is https sefm book github io Foundations of Software Science and Computation Structures Naoki Kobayashi, James Worrell, 2024-04-05 The two open access volumes LNCS 14574 and 14575 constitute the proceedings of the 27th International Conference on Foundations of Software Science and Computation Structures FOSSACS 2024 which took place in Luxembourg in April 2024 The 24 full papers included in this book were carefully reviewed and selected from 79 submissions They were organized in topical sections as follows Part I Infinite games categorical semantics automata and synthesis Part II Types and programming languages logic and proofs infinite state systems **Springer Handbook of** Ocean Engineering Manhar R.
