Advanced Lukasiewicz calculus and MV-algebras D. Mundici, 2011-06-22 This is a continuation of Vol 7 of Trends in Logic It will cover the wealth of recent developments of Lukasiewicz Logic and their algebras Chang MV algebras with particular reference to de Finetti coherent evaluation of continuously valued events Renyi conditionals for such events related algorithms

Logic, Language, and Computation Guram Bezhanishvili, Sebastian Löbner, Vincenzo Marra, Frank Richter, 2013-03-14 This book constitutes the refereed proceedings of the 9th International Tbilisi Symposium on Logic Language and Computation TbiLLC 2011 held in Kutaisi Georgia in September 2011 The book consists of summaries of 3 tutorials presented at the symposium together with 13 full papers that were carefully reviewed and selected from the submissions The papers are organized in two sections one on Language and one on Logic and Computation The range of topics covered in the Language section includes natural language syntax semantics and pragmatics frames in natural language semantics linguistic typology and discourse phenomena The papers in the Logic and Computation section cover such topics as constructive modal algebraic and philosophical logic as well as logics for computer science applications

On Logical, Algebraic, and Probabilistic Aspects of Fuzzy Set Theory Susanne Saminger-Platz, Radko Mesiar, 2016-01-11 The book is a collection of contributions by leading experts developed around traditional themes discussed at the annual Linz Seminars on Fuzzy Set Theory The different chapters have been written by former PhD students colleagues co authors and friends of Peter Klement a leading researcher and the organizer of the Linz Seminars on Fuzzy Set Theory The book also includes advanced findings on topics inspired by Klement's research activities concerning copulas measures and integrals as well as aggregation problems Some of the chapters reflect personal views and controversial aspects of traditional topics while others deal with deep mathematical theories such as the algebraic and logical foundations of fuzzy set theory and fuzzy logic Originally thought as an homage to Peter Klement the book also represents an advanced reference guide to the mathematical theories related to fuzzy logic and fuzzy set theory with the potential to stimulate important discussions on new research directions in the field

Petr Hájek on Mathematical Fuzzy Logic Franco Montagna, 2014-09-23 This volume celebrates the work of Petr Hájek on mathematical fuzzy logic and presents how his efforts have influenced prominent logicians who are continuing his work The book opens with a discussion on Hájek's contribution to mathematical fuzzy logic and with a scientific biography of him progresses to include two articles with a foundation flavour that demonstrate some important aspects of Hájek's production namely a paper on the development of fuzzy sets and another paper on some fuzzy versions of set theory and arithmetic Articles in the volume also focus on the treatment of vagueness building connections between Hájek's favorite fuzzy logic and linguistic models of vagueness Other articles introduce alternative notions of consequence relation namely the preservation of truth degrees which is discussed in a general context and the differential semantics For the latter a surprisingly strong standard completeness theorem is proved Another contribution also looks at

two principles valid in classical logic and characterize the three main t norm logics in terms of these principles Other articles with an algebraic flavour offer a summary of the applications of lattice ordered groups to many valued logic and to quantum logic as well as an investigation of prelinearity in varieties of pointed lattice ordered algebras that satisfy a weak form of distributivity and have a very weak implication The last part of the volume contains an article on possibilistic modal logics defined over MTL chains a topic that H jek discussed in his celebrated work *Metamathematics of Fuzzy Logic* and another one where the authors besides offering unexpected premises such as proposing to call H jek s basic fuzzy logic HL instead of BL propose a very weak system called SL as a candidate for the role of the really basic fuzzy logic The paper also provides a generalization of the prelinearity axiom which was investigated by H jek in the context of fuzzy logic *The Logic of Software. A Tasting Menu of Formal Methods* Wolfgang Ahrendt, Bernhard Beckert, Richard Bubel, Einar Broch Johnsen, 2022-07-04 This Festschrift dedicated to Reiner H hnle on the occasion of his 60th birthday contains papers written by many of his closest collaborators After positions at Karlsruhe Institute of Technology and Chalmers University of Technology since 2011 Reiner has been the chaired professor of Software Engineering at Technische Universit t Darmstadt where his team focuses on the formal verification of object oriented software the formal modeling and specification of highly adaptive software systems and formal modeling and analysis in domains such as biological systems and railroad operations His work is characterized by achievements in theory and in practical implementations significant collaborations include the KeY project and the development of the ABS language He has served as chair and editor of important related academic conferences and coauthored almost 200 academic publications The contributions in this volume reflect Reiner s main research focus formal methods in particular applied to software verification **Fields of Logic and Computation III** Andreas Blass, Patrick Cégielski, Nachum Dershowitz, Manfred Droste, Bernd Finkbeiner, 2020-05-22 This Festschrift is published in honor of Yuri Gurevich s 80th birthday An associated conference YuriFest 2020 was planned for May 18 20 in Fontainebleau France in combination with the 39th Journ es sur les Arithm tiques Faibles also celebrating Yuri s 80th birthday Because of the coronavirus situation the conference had to be postponed but this Festschrift is being published as originally planned It addresses a very wide variety of topics but by no means all of the fields of logic and computation in which Yuri has made important progress *Concepts of Proof in Mathematics, Philosophy, and Computer Science* Dieter Probst, Peter Schuster, 2016-07-25 A proof is a successful demonstration that a conclusion necessarily follows by logical reasoning from axioms which are considered evident for the given context and agreed upon by the community It is this concept that sets mathematics apart from other disciplines and distinguishes it as the prototype of a deductive science Proofs thus are utterly relevant for research teaching and communication in mathematics and of particular interest for the philosophy of mathematics In computer science moreover proofs have proved to be a rich source for already certified algorithms This book provides the reader with a collection of articles covering relevant current research topics circled

around the concept proof It tries to give due consideration to the depth and breadth of the subject by discussing its philosophical and methodological aspects addressing foundational issues induced by Hilbert s Programme and the benefits of the arising formal notions of proof without neglecting reasoning in natural language proofs and applications in computer science such as program extraction Logic, Language, Information, and Computation Ulrich Kohlenbach,Pablo Barceló,Ruy J G B de Queiroz,2014-08-23 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the 21st Workshop on Logic Language Information and Communication WoLLIC 2014 held in Valparaíso Chile in September 2014 The 15 contributed papers presented together with 6 invited lectures were carefully reviewed and selected from 29 submissions The focus of the workshop was on the following subjects Inter Disciplinary Research involving Formal Logic Computing and Programming Theory and Natural Language and Reasoning *Nonclassical Logics and Their Applications* Shier Ju,Alessandra Palmigiano,Minghui Ma,2020-01-31 This edited book focuses on non classical logics and their applications highlighting the rapid advances and the new perspectives that are emerging in this area Non classical logics are logical formalisms that violate or go beyond classical logic laws and their specific features make them particularly suited to describing and reason about aspects of social interaction The richness and diversity of non classical logics mean that this area is a natural catalyst for ideas and insights from many different fields from information theory to game theory and business science This volume is the post proceedings of the 8th International Conference on Logic and Cognition held at Sun Yat Sen University Institute of Logic and Cognition ILC in Guangzhou China in December 2016 The conference series started in 2001 and is organized by the ILC often in collaboration with various international research groups This eighth installment was jointly organized by ILC and Alessandra Palmigiano s Applied Logic research group The conference series aims to foster the development of effective logical tools to study social behavior from a philosophical cognitive and formal perspective in order to challenge the field of logic in ways that open up new and exciting research directions Chapter The Category of Node and Choice Forms with Subcategories for Choice Sequence Forms and Choice Set Forms of this book is available open access under a CC BY 4.0 license at link [springer.com](https://www.springer.com) Advances in Computational Intelligence, Part II Salvatore Greco,Bernadette Bouchon-Meunier,Giulianella Coletti,Mario Fedrizzi,Benedetto Matarazzo,Ronald R.
