

Respiratory Care Practice Exam

Gary Persing, TMC Q&A + Rationale

1) A patient receiving positive expiratory pressure (PEP) therapy through a mouthpiece at 10 cm H₂O has minimal secretion production. Course crackles are heard during auscultation. The respiratory therapist should recommend which of the following?

- A. Decrease the PEP to 5 cm H₂O.
- B. Discontinue the treatment and begin percussion and postural drainage.
- C. **Increase the PEP to 15 cm H₂O.**
- D. Administer the treatment with a mask instead of the mouthpiece.

Correct Answer is C

Rationale: PEP therapy is indicated for patients with retained secretions. Positive pressure applied during exhalation aids in the mobilization of secretions. Generally, PEP levels of 10 to 20 cm H₂O are used. If the PEP used does not result in the mobilization of secretions, the PEP should be increased.

2) A heated humidifier is delivering 26 mg of H₂O/L of gas to an intubated patient. Which of the following statements concerning this situation are true?

- | |
|---|
| 1. A humidity deficit exists. |
| 2. The patient's secretions may become thicker. |
| 3. The heater temperature should be decreased. |

- A. 1 only
- B. **1 and 2 only**
- C. 2 and 3 only
- D. 1, 2, and 3

Correct Answer is B

Rationale: Whenever the amount of H₂O being delivered to the patient is less than 44 mg/L, a humidity deficit exists. This decreased H₂O delivery can result in thickening of pulmonary secretions, with an increased potential of mucous plugging and atelectasis distal to the plugs. Because cooler air cannot hold as much H₂O as warmer air, decreasing the heater temperature increases the humidity deficit.

3) The respiratory therapist is administering acetylcysteine (Mucomyst) via a handheld nebulizer to a patient who suddenly becomes short of breath. Which of the following is the most appropriate recommendation at this time?

- A. Have the patient take deeper breaths.
- B. Add racemic epinephrine to the nebulizer.
- C. **Stop the treatment and administer albuterol.**
- D. Stop the treatment and administer cromolyn sodium.
