These proceedings contain the refereed full technical papers presented at the 26th Annual European Conference on Information

Retrieval ECIR 2004 ECIR is the annual conference of the British Computer Society's specialist group in Information Retrieval. This year the conference was held at the School of Computing and Technology at the University of Sunderland. ECIR began life as the annual Colloquium on Information Retrieval Research. The colloquium was held in the UK each year until 1998 when the event was held in Grenoble, France. Since then the conference venue has alternated between the United Kingdom and Continental Europe and the event was renamed the European Conference on Information Retrieval. In recent years ECIR has continued to grow and has become the major European forum for the discussion of research in the field of Information Retrieval. To mark this metamorphosis from a small informal colloquium to a major event in the IR research calendar the BCS IRSG decided to rename the event to the European Conference on Information Retrieval.

ECIR 2004 received 88 full paper submissions from across Europe and further afield including North America, China and Australia, a testament to the growing popularity and reputation of the conference. Out of the 88 submitted papers 28 were accepted for presentation. All papers were reviewed by at least three reviewers. Among the accepted papers 11 have a student as the primary author, illustrating that the traditional student focus of the original colloquium is alive today. Advances in Information Retrieval W. The Center for Intelligent Information Retrieval (CIIR) was formed in the Computer Science Department of the University of Massachusetts Amherst in 1992. The core support for the Center came from a National Science Foundation State Industry University Cooperative Research Center (SIUCRC) grant, although there had been a sizeable information retrieval (IR) research group for over 10 years prior to that grant. The basic goal of these Centers is to combine basic research, applied research, and technology transfer. The CIIR has been successful in each of these areas in that it has produced over 270 research papers, has been involved in many successful government and industry collaborations, and has had a significant role in high visibility Internet sites and start-ups. As a result of these efforts the CIIR has become known internationally as one of the leading research groups in the area of information retrieval. The CIIR focuses on research that results in more effective and efficient access and discovery in large heterogeneous distributed text and multimedia databases. The scope of the work that is done in the CIIR is broad and goes significantly beyond traditional areas of information retrieval such as retrieval models, cross-lingual search, and automatic query expansion. The research includes both low-level systems issues such as the design of protocols and architectures for distributed search, as well as more human-centered topics such as user interface design, visualization, and data mining with text and multimedia retrieval. **Advances in Information Retrieval** Leif Azzopardi, Benno Stein, Norbert Fuhr, Philipp Mayr, Claudia Hauff, Djoerd Hiemstra, 2019-04-06
