Biology By Numbers An Encouragement To Quantitative Thinking:

Biology by Numbers Richard F. Burton, 1998-02-26 This textbook is both an introduction to quantitative biology and a guide for the number shy Richard Burton fosters a sense of the fundamental importance and usefulness of mathematical principles in biology with a fascinating range of examples The book is geared toward the nonmathematician and covers the basics as well as various more advanced topics from many diverse biological disciplines Questions and calculations encourage active participation without holding up the casual reader A key feature is the structure of the book Rather than building it around biological disciplines Dr Burton emphasizes the common ways of reasoning used in areas as diverse as insect and population growth seed mortality and sensory response to mention a few that use logarithms *Physiology by*

Numbers Richard F. Burton, 2000-04-20 Thinking quantitatively about physiology is something many students find difficult However it is fundamentally important to a proper understanding of many of the concepts involved In this enlarged second edition of his popular textbook Richard Burton gives the reader the opportunity to develop a feel for values such as ion concentrations lung and fluid volumes blood pressures etc through the use of calculations which require little more than simple arithmetic for their solution Much guidance is given on how to avoid errors and the usefulness of approximation and back of envelope sums Energy metabolism nerve and muscle blood and the cardiovascular system respiration renal function body fluids and acid base balance are all covered making this book essential reading for students and teachers of physiology everywhere both those who shy away from numbers and those who revel in them Biology by Numbers Richard F.

Burton, 1998-02-26 A practical undergraduate textbook for maths shy biology students showing how basic maths reveals important insights *Inspiring Students* Kemel (Principle Teaching Fellow Ahmet, 2013-09-13 This text looks at the problems of teaching HE students whose main interest and discipline lies elsewhere Contributors describe strategies they have developed to inspire students and case studies are used to transfer key ideas to other teachers Food Webs and

Biodiversity Axel G. Rossberg, 2013-06-03 Food webs have now been addressed in empirical and theoretical research for more than 50 years Yet even elementary foundational issues are still hotly debated One difficulty is that a multitude of processes need to be taken into account to understand the patterns found empirically in the structure of food webs and communities Food Webs and Biodiversity develops a fresh comprehensive perspective on food webs Mechanistic explanations for several known macroecological patterns are derived from a few fundamental concepts which are quantitatively linked to field observables An argument is developed that food webs will often be the key to understanding patterns of biodiversity at community level Key Features Predicts generic characteristics of ecological communities in invasion extirpation equilibrium Generalizes the theory of competition to food webs with arbitrary topologies Presents a new testable quantitative theory for the mechanisms determining species richness in food webs and other new results Written by an internationally respected expert in the field With global warming and other pressures on ecosystems rising understanding and protecting biodiversity

is a cause of international concern This highly topical book will be of interest to a wide ranging audience including not only graduate students and practitioners in community and conservation ecology but also the complex systems research community as well as mathematicians and physicists interested in the theory of networks This is a comprehensive work outlining a large array of very novel and potentially game changing ideas in food web ecology Ken Haste Andersen Technical University of Denmark I believe that this will be a landmark book in community ecology it presents a well established and consistent mathematical theory of food webs It is testable in many ways and the author finds remarkable agreements between predictions and reality G za Mesz na E tv s University Budapest
