Mass Spectrometry-Based Proteomics Kris Gevaert, 2023-09-04

This detailed volume explores contemporary techniques in mass spectrometry based proteomics. After covering overall proteome coverage and the cellular surfaceome, the book delves into proximity induced biotinylation, abduction of protein complexes in viral like particles, and thermal proteome profiling, as well as protocols for identifying protein N terminal acetylation, protein processing by proteases, protein N glycosylation, and protein phosphorylation. The book also collects chapters on automated preparation of clinical samples, the analysis of formalin fixed paraffin embedded samples, protocols for the isolation of extracellular vesicles, and for the monitoring of selected protein modifications in clinical samples, and finally structural proteomics. Written for the highly successful Methods in Molecular Biology series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step by step and readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, Mass Spectrometry Based Proteomics serves as an ideal guide to its subject for both novices in the field of proteomics as well as specialists.
