

NEURON AND NEUROMUSCULAR JUNCTION

Name _____

Neuron

Label the diagram at the left.

- a. cell body (cyton)
- b. nucleus
- c. dendrites
- d. axon
- e. node of Ranvier
- f. terminal branches
- g. synaptic knobs
- h. Schwann cell
- i. Schwann cell nucleus
- j. myelin sheath

Fill in the blanks with the correct answers.

Neurons are specialized for the transmission of nerve impulses. The nucleus is located in the cell body of the neuron. From the cell body, two types of structures carry out transmission functions. Dendrites transmit nerve impulses from other cells or sensory systems. Axons provide for the transmission of nerve impulses away from the cell body. A single neuron cell can be over a meter long due to the length of its axon. Schwann cells are the supporting cells associated with axons. They form a(n) myelin sheath around many vertebrate neurons. Nodes of Ranvier interrupt the myelin sheath where the axon is in direct contact with surrounding intercellular fluid. The junction between a neuron and a muscle is called a(n) neuromuscular junction. Acetylcholine is the neurotransmitter. At a neuromuscular junction, acetylcholine released from a(n) axon depolarizes the muscle cell membrane and triggers muscle contractions.

Neuromuscular Junction

Label the following parts of a neuromuscular junction.

- a. axon
- b. cleft - a narrow gap separating the synaptic knob of a transmitting neuron from a receiving neuron or an effector cell
- c. synaptic knob
- d. muscle fiber
- e. acetylcholine sacs

Cardiovascular Specific Gene Expression P.A.F.M. Doevendans, Robert S. Reneman, Marc van Bilsen, 2013-04-17

Improving our insights into the genetic predisposition to cardiovascular disease is one of the most important challenges in our field in the next millennium not only to unravel the cause of disease but also to improve the selection of patients for particular treatments Nowadays for example subjects with a cholesterol above a particular plasma level are exposed to a cholesterol lowering regime based upon the beneficial outcome of epidemiological studies which include subjects not prone to the disease despite a plasma cholesterol above the accepted level Identification of the patients who are genetically predisposed to the consequences of this disorder will reduce the number of subjects unnecessarily treated and hence the costs of health care Because in most cardiovascular diseases the genetic component is a consequence of more than one gene defect only limited progress has as yet been made in identifying subjects genetically at risk For example in hypertension only in less than 10% of the patients the genetic defect has been identified It has been known for quite some time that in heart and blood vessels fetal genes are as high blood pressure and upregulated or induced when they are exposed to such disorders ischemia Little is known about the function of these genes in the cardiac and vascular adaptation to these disorders only guesses can be made **Connexins** Andrew Harris, Darren Locke, 2008-11-09 Connexins A Guide is a practical and valuable reference and text covering a wide scope of information about the connexin family of membrane channel proteins The editors and contributing authors intend for this cutting edge work to be informative to scientists wishing to learn about the field as well as to those who are active researchers in this area Connexins A Guide masterfully addresses specific needs of the scientific community it is a comprehensive and comprehensible narrative of the uncommonly diverse connexin field making previously hard to find information easily accessible while also presenting intelligible insights into the extensive experimental methods and conceptual frameworks necessary to appreciate and understand the important roles that connexin channel proteins play in health and disease *Normal and Abnormal Processes in the Basic Sciences* ,1996 , ,
