Ideal Daniela Cutas, Sarah Chan, 2012-11-22 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com This book examines through a multi disciplinary lens the possibilities offered by relationships and family forms that challenge the nuclear family ideal and some of the arguments that recommend or disqualify these as legitimate units in our societies That children should be conceived naturally born to and raised by their two young heterosexual married to each other genetic parents that this relationship between parents is also the ideal relationship between romantic or sexual partners and that romance and sexual intimacy ought to be at the core of our closest personal relationships all these elements converge towards the ideal of the nuclear family The authors consider a range of relationship and family structures that depart from this ideal polyamory and polygamy single and polyparenting parenting by gay and lesbian couples as well as families created through assisted human reproduction **Global Health and International Community** John Coggon, Swati Gola, 2013-09-12 Global health arguably represents the most pressing issues facing humanity Trends in international migration and transnational commerce render state boundaries increasingly

porous Human activity in one part of the world can lead to health impacts elsewhere Animals viruses and bacteria as well as pandemics and environmental disasters do not recognize or respect political borders It is now widely accepted that a global perspective on the understanding of threats to health and how to respond to them is required but there are many practical problems in establishing such an approach This book offers a foundational study of these urgent and challenging problems combining critical analysis with practically focused policy contributions The contributors span the fields of ethics human rights international relations law philosophy and global politics They address normative questions relating to justice equity and inequality and practical questions regarding multi organizational cooperation global governance and international relations Moving from the theoretical to the practical Global Health and International Community is an essential resource for scholars students activists and policy makers across the globe

The freedom of scientific research Simona Giordano, John Harris, Lucio Piccirillo, 2018-10-05 This electronic version has been made available under a Creative Commons BY NC ND open access license Never before have the scope and limits of scientific freedom been more important or more under attack New science from artificial intelligence to gene editing creates unique opportunities for making the world a better place It also presents unprecedented dangers This book is about the opportunities and challenges moral regulatory and existential that face both science and society How are scientific developments impacting on human life and on the structure of societies How is science regulated and how should it be regulated Are there ethical boundaries to scientific developments in sensitive areas Such are the questions that the book seeks to answer Both the survival of humankind and the continued existence of our planet are at stake

Play Among Books Miro Roman, Alice_ch3n81, 2021-12-06 How does coding change the way we think about architecture This question opens up an important research perspective In this book Miro Roman and his AI Alice_ch3n81 develop a playful scenario in which they propose coding as the new literacy of information They convey knowledge in the form of a project model that links the fields of architecture and information through two interwoven narrative strands in an infinite flow of real books Focusing on the intersection of information technology and architectural formulation the authors create an evolving intellectual reflection on digital architecture and computer science

The Private Life of the Genome Iain Brassington, 2023-05-17 This innovative and engaging book argues that because our genetic information is directly linked to the genetic information of others it is impossible to assert a right to privacy in the same way that we can in other areas of life This position throws up questions around access to sensitive data It suggests that we may have to abandon certain intuitions about who may access our genetic information and it raises concerns about discrimination against people with certain genetic characteristics But the author asserts that regulating access to genetic information requires a more nuanced perspective that does not rely on the familiar language of rights The book proposes new ways in which we may think about who has access to what genetic information and on what basis they do so Conceptually challenging the book will prove engaging reading for scholars and students interested in the area of bioethics and medical law as well as

policy makers working with these pressing issues **Life, Love and Children** Irina Pollard, 2012-12-06 Discussion of bioscience ethics requires understanding of the science that underpins biological systems impinging on our lives Unencumbered by the formal structure of ethics bioethics presents a forum for discussion of practical matters of individual and collective concern This comprehensive text is a guide to the essentials of bioscience ethics and an interface between applied science and applied bioethics Early chapters embrace topics affecting human reproduction substance abuse and parenthood aging gametes and congenital malformations child abuse and its biological consequences Intermediate chapters deal with end of life care and euthanasia human fertility assisted reproductive technologies genetic engineering and cloning Remaining chapters challenge human dominated ecosystems Population growth economic activity and warfare with its environmental consequences are reviewed A background section describes the evolution of ethical consciousness explores the future and proposes that the reworking of ethical boundaries can enhance mature decision making in harmony with changing technology
