A purely discretionary approach to trading generally breaks down over the long haul. With market data and statistics easily available, traders are increasingly opting to employ an automated or algorithmic trading system, enough that algorithmic trades now account for the bulk of stock trading volume. **Building Algorithmic Trading Systems** teaches you how to develop your own systems with an eye toward market fluctuations and the impermanence of even the most effective algorithm. Learn the systems that generated triple digit returns in the World Cup Trading Championship. Develop an algorithmic approach for any trading idea using off the shelf software or popular platforms. Test your new system using historical and current market data. Mine market data for statistical tendencies that may form the basis of a new system. Market patterns change and so do system results. Past performance isn't a guarantee of future success so the key is to continually develop new systems and adjust established systems in response to evolving statistical tendencies. For individual traders looking for the next leap forward, **Building Algorithmic Trading Systems** provides expert guidance and practical advice.
