Access to Broadband Networks Angele A. Gilroy, 2012-11-22 As congressional policymakers continue to debate telecommunications reform a major point of contention is the question of whether action is needed to ensure unfettered access to the Internet The move to place restrictions on the owners of the networks that compose and provide access to the Internet to ensure equal access and non discriminatory treatment is referred to as net neutrality While there is no single accepted definition of net neutrality most agree that any such definition should include the general principles that owners of the networks that compose and provide access to the Internet should not control how consumers lawfully use that network and they should not be able to discriminate against content provider access to that network A major focus in the debate is concern over whether it is necessary for policymakers to take steps to ensure access to the Internet for content services and applications providers as well as consumers and if so what these steps should be Some policymakers contend that more specific regulatory guidelines may be necessary to protect the marketplace from potential abuses which could threaten the net neutrality concept Others contend that existing laws and policies are sufficient to deal with potential anti competitive behavior and that additional regulations would have negative effects on the expansion and future development of the Internet The December 21 2010 adoption and November 20 2011 implementation by the Federal Communications Commission FCC of its Open Internet Order has focused attention on the issue Although most concede that networks have always needed and will continue to need some management the use of prioritization tools such as deep packet inspection as well as the initiation of metered usage based billing practices have further fueled the debate A consensus on the net neutrality issue has remained elusive and support for the FCC s Open Internet Order has been mixed While some Members of Congress support the action and in some cases would have supported an even stronger approach others feel that the FCC has overstepped its authority and that the regulation of the Internet is not only unnecessary but harmful Internet regulation and the FCC s authority to implement such regulations has been a topic of legislation H R 96 H R 166 S 74 H R 2434 H R 1 H R 3630 H J Res 37 and S J Res 6 and hearings in the 112th Congress The House on April 8 2011 passed 240 179 H J Res 37 to state disapproval of and remove the force and effect of the FCC s Open Internet Order However an identical resolution of disapproval S J Res 6 failed to pass the

Senate on November 10 2011 by a 52-46 vote Attempts to prohibit implementation through the appropriations process by the withholding of FCC funds for such purposes have also been unsuccessful It is anticipated that the issue of Internet access will be of continued interest to policymakers The net neutrality issue has also been narrowly addressed within the context of the American Recovery and Reinvestment Act of 2009 ARRA P L 111-5 Provisions required the National Telecommunications and Information Administration NTIA in consultation with the FCC to establish nondiscrimination and network interconnection obligations as a requirement for grant participants in the Broadband Technology Opportunities Program BTOP These obligations were released July 1 2009 in conjunction with the issuance of a notice of funds availability soliciting applications Recipients of these awards have been selected and continued congressional oversight is expected *The Net Neutrality Debate* Congressional Service, 2017-12 As congressional policymakers continue to debate telecommunications reform a major discussion point revolves around what approach should be taken to ensure unfettered access to the Internet The move to place restrictions on the owners of the networks that compose and provide access to the Internet to ensure equal access and nondiscriminatory treatment is referred to as net neutrality While there is no single accepted definition of net neutrality most agree that any such definition should include the general principles that owners of the networks that compose and provide access to the Internet should not control how consumers lawfully use that network and they should not be able to discriminate against content provider access to that network The Federal Communications Commission FCC in its February 26 2015 open meeting voted 3-2 along party lines to adopt new open Internet rules and released these rules on March 12 2015 One of the most controversial aspects of the rules is the decision to reclassify broadband Internet access service as telecommunications service under Title II thereby subjecting Internet service providers to a more stringent regulatory framework With limited exceptions the rules went into effect June 12 2015 Various parties challenged the legality of the FCC's 2015 Open Internet Order but the U.S. Court of Appeals for the D.C. Circuit in a June 14 2016 ruling voted 2-1 to uphold the legality of all aspects of the 2015 FCC Order A petition for full U.S. Appeals Court review was denied and parties have petitioned for U.S. Supreme Court review The FCC's May 18 2017 adoption 2-1 of a Notice of Proposed Rulemaking to reexamine the rules adopted in 2015 with an eye to considering a less regulatory approach has once again opened up the debate over what the appropriate framework is to ensure an open Internet Reaction to this proposal has been mixed Some see the current FCC rules as regulatory overreach and welcome a more light touch approach which they feel will stimulate broadband investment deployment and innovation Others fully support the current 2015 regulations and feel that their modification will result in a concentration of power to the detriment of content services and applications providers as well as consumers and refute the claim that these regulations have had a negative impact on broadband investment expansion or innovation The draft Order is currently under circulation to the commissioners with a vote by the full commission tentatively scheduled for December 14 2017 To date congressional action in the 115th Congress has focused on two aspects of the

The net neutrality issue has also been narrowly addressed within the context of the American Recovery and Reinvestment Act of 2009 ARRA P L 111 5 Provisions required the National Telecommunications and Information Administration NTIA in consultation with the FCC to establish nondiscrimination and network interconnection obligations as a requirement for grant participants in the Broadband Technology Opportunities Program BTOP These obligations were released July 1 2009 in conjunction with the issuance of a notice of funds availability soliciting applications Recipients of these awards have been selected and continued congressional oversight is expected
