

WHAT IS BLOOD?

Blood is a vital fluid that circulates throughout the body, delivering essential nutrients and oxygen to tissues and organs while also removing waste products.

It is made up of red blood cells, white blood cells, and platelets suspended in a liquid called plasma.

The red blood cells contain hemoglobin, which carries oxygen from the lungs to the body's tissues. The white blood cells are involved in the body's immune response, while the platelets help with blood clotting to prevent excessive bleeding. **Blood** plays a crucial role in maintaining the body's health and vitality.
