processing of health and genetic data while simultaneously allowing considerable multi level exceptions for the purposes of scientific research In addition to directly applicable exceptions the GDPR places the regulatory responsibility for further defining how the Member States strike a balance between the individuals rights and the public interest in research within their national legal orders Since Member States approaches to the trade off between data subjects rights on the one hand and appropriate safeguards on the other differ according to their ethical and legal traditions their data protection requirements for research also differ considerably This study takes a comprehensive approach to determine how the GDPR affects regulatory regimes on the use of personal data in biobanking research with a particular focus on the balance between individuals rights public interest and scientific research In this regard it has two main goals first to scrutinize the GDPR research regime its objective and constitutive elements the impact it has on biobanking and its role in a changing EU landscape post Brexit and second to examine how various exceptions have been operationalized nationally and what challenges and opportunities this diversification entails The book not only captures the complexity GDPR creates for biobanking but also sheds light on various approaches to tackling the corresponding challenges It offers the first comprehensive analysis of GDPR for biobanking and the most up to date overview of the national biobank regulatory frameworks in Europe
