Analysis And Numerics Of Partial Differential Equations Springer Indam Series:

Analysis and Numerics of Partial Differential Equations Franco Brezzi, Piero Colli Franzone, Ugo Pietro Gianazza, Gianni Gilardi, 2012-12-22 This volume is a selection of contributions offered by friends collaborators past students in memory of Enrico Magenes The first part gives a wide historical perspective of Magenes work in his 50 year mathematical career the second part contains original research papers and shows how ideas methods and techniques introduced by Magenes and his collaborators still have an impact on the current research in Mathematics

Numerical Models for Differential Problems Alfio Quarteroni, 2017-10-10 In this text we introduce the basic concepts for the numerical modeling of partial differential equations We consider the classical elliptic parabolic and hyperbolic linear equations but also the diffusion transport and Navier Stokes equations as well as equations representing conservation laws saddle point problems and optimal control problems Furthermore we provide numerous physical examples which underline such equations We then analyze numerical solution methods based on finite elements finite differences finite volumes spectral methods and domain decomposition methods and reduced basis methods In particular we discuss the algorithmic and computer implementation aspects and provide a number of easy to use programs The text does not require any previous advanced mathematical knowledge of partial differential equations the absolutely essential concepts are reported in a preliminary chapter It is therefore suitable for students of bachelor and master courses in scientific disciplines and recommendable to those researchers in the academic and extra academic domain who want to approach this interesting branch of applied mathematics

Spectral and High Order Methods for Partial Differential Equations ICOSAHOM 2014 Robert M. Kirby, Martin Berzins, Jan S. Hesthaven, 2015-11-26 The book contains a selection of high quality papers chosen among the best presentations during the International Conference on Spectral and High Order Methods 2014 and provides an overview of the depth and breadth of the activities within this important research area The carefully reviewed selection of papers will provide the reader with a snapshot of the state of the art and help initiate new research directions through the extensive biography

Certified Reduced Basis Methods for Parametrized Partial Differential Equations Jan S Hesthaven, Gianluigi Rozza, Benjamin Stamm, 2015-08-20 This book provides a thorough introduction to the mathematical and algorithmic aspects of certified reduced basis methods for parametrized partial differential equations Central aspects ranging from model construction error estimation and computational efficiency to empirical interpolation methods are discussed in detail for coercive problems More advanced aspects associated with time dependent problems non compliant and non coercive problems and applications with geometric variation are also discussed as examples

Real Time Reduced Order Computational Mechanics Gianluigi Rozza, Francesco Ballarin, Leonardo Scandurra, Federico Pichi, 2024-05-23 The book is made up by several worked out problems concerning the application of reduced order modeling to different parametric partial differential equations problems with an increasing degree of complexity This work is based on some experience acquired during lectures and

exercises in classes taught at SISSA Mathematics Area in the Doctoral Programme Mathematical Analysis Modelling and Applications especially in computational mechanics classes as well as regular courses previously taught at EPF Lausanne and during several summer and winter schools The book is a companion for master and doctoral degree classes by allowing to go more deeply inside some partial differential equations worked out problems examples and even exercises but it is also addressed for researchers who are newcomers in computational mechanics with reduced order modeling In order to discuss computational results for the worked out problems presented in this booklet we will rely on the RBniCS Project The RBniCS Project contains an implementation in FEniCS of the reduced order modeling techniques such as certified reduced basis method and Proper Orthogonal Decomposition Galerkin methods for parametric problems that will be introduced in this booklet

New Trends In Differential Equations, Control Theory And Optimization - Proceedings Of The 8th Congress Of Romanian Mathematicians Viorel Barbu,Catalin Lefter,Ioan I Vrabie,2016-06-17 The volume contains a collection of original papers and surveys in various areas of Differential Equations Control Theory and Optimization written by well known specialists and is thus useful for PhD students and researchers in applied mathematics

Spectral and High Order Methods for Partial Differential Equations ICOSAHOM 2016 Marco L. Bittencourt,Ney A. Dumont,Jan S. Hesthaven,2017-11-07 This book features a selection of high quality papers chosen from the best presentations at the International Conference on Spectral and High Order Methods 2016 offering an overview of the depth and breadth of the activities within this important research area The carefully reviewed papers provide a snapshot of the state of the art while the extensive bibliography helps initiate new research directions
