Analysis and Applications - ISAAC 2001 Heinrich G.W. Begehr,R.P. Gilbert,Man-Wah Wong,2013-03-14 This collection of survey articles gives an idea of new methods and results in real and complex analysis and its applications Besides several chapters on hyperbolic equations and systems and complex analysis potential theory dynamical systems and harmonic analysis are also included Newly developed subjects from power geometry homogenization partial differential equations in graph structures are presented and a decomposition of the Hilbert space and Hamiltonian are given Audience Advanced students and scientists interested in new methods and results in analysis and applications

Differential Equations And Their Applications: Analysis From A Physicist's Viewpoint Noboru Nakanishi,Kenji Seto,2022-04-22 This book is written for students and researchers who are fond of mathematics and the natural sciences It consists of two parts Part I presents the theory of analysis in which the mathematical theory is described not as an accomplished palace but as a building under construction It uncovers how a theory has been or is being constructed In Part II the theory of differential equations is applied to interesting practical problems such as pursuit line and tractrix attack on an object from an airplane an insect crawling along a stretching rubber rod the SIR model of a virus infection string vibration circular membrane vibration as well as the wind ripple sand dune and wave phenomena on a highway Furthermore the problems of a one dimensional lattice vibration the keyboard percussion vibration and the eigenvalue problems in quantum mechanics such as the Aharonov Bohm effect are also investigated in detail

Reproducing Kernels and their Applications S. Saitoh,Daniel Alpay,Joseph A. Ball,Takeo Ohsawa,2013-11-11 The First International Congress of the International Society for Analysis its Applications and Computations ISAAC 97 was held at the University of Delaware from 3 to 7 June 1997 As specified in the invitation of the

President Professor Robert P Gilbert of the ISAAC we organized the session on Reproducing Kernels and Their Applications In our session we presented 24 engaging talks on topics of current interest to the research community As suggested and organized by Professor Gilbert we hereby publish its Proceedings Rather than restricting the papers to Congress participants we asked the leading mathematicians in the field of the theory of reproducing kernels to submit papers However due to time restrictions and a compulsion to limit the Proceedings a reasonable size we were unable to obtain a comprehensive treatment of the theory of reproducing kernels Nevertheless we hope this Proceedings of the First International Conference on reproducing kernels will become a significant reference volume Indeed we believe that the theory of reproducing kernels will stand out as a fundamental and beautiful contribution in mathematical sciences with a broad array of applications to other areas of mathematics and science We would like to thank Professor Robert Gilbert for his substantial contributions to the Congress and to our Proceedings We also express our sincere thanks to the staff of the University of Delaware for their manifold cooperation in organizing the Congress

Topics in the Theory of Schrödinger Operators Huzihiro Araki, Hiroshi Ezawa, 2004. This invaluable book presents reviews of some recent topics in the theory of Schrödinger operators. It includes a short introduction to the subject, a survey of the theory of the Schrödinger equation when the potential depends on the time periodically, an introduction to the so-called FBI transformation also known as coherent state expansion with application to the semi-classical limit of the S matrix, an overview of inverse spectral and scattering problems, and a study of the ground state of the Pauli-Fierz model with the use of the functional integral. The material is accessible to graduate students and non-expert researchers.
