ABSTRACT

Micro, Small and Medium Enterprises (MSMEs) are a group effort proved resistant to a wide range of economic crisis shocks. But in the operation of their business financial management is still not transparent and are also still mixed between business finance and personal finance. So that needs to be done with good financial management. In this research, analysis and information system design financial reports as a basis for the development of the system. Software development life cycle (SDLC) using the model of the object oriented approach. With object-oriented approach, the tools used by the common Unified Modelling Language (UML). In object-oriented approach all systems applications are viewed as a collection of objects that allow organisms interlocking and and users to easily understand logical system. Object-oriented approach Provides the benefits of the ease of codes and saves the time for developing quality product.

1. INTRODUCTION

Micro, Small and Medium Enterprises (MSMEs) is one of the nation's economic driving. MSMEs is the economy of Indonesia is a business group that proved resistant to a wide range of economic crisis shocks. However, there are obstacles that they face. Not a few of MSMEs that are difficult growing quickly because it does not have the power to achieve bank financing program. The operational aspects of MSMEs is still weak and less support to grow larger. One of the reasons this happens is less transparent financial management and there is no separation between personal and business money money. So that need for good financial management in order to produce quality information to support decision making.

The development of information technology provides the computer role originally emphasized as solutions, has now developed a machine that can help a wide range of human activities consists of MSMEs financial management can be handled by the build system information software Financial Statements MSMEs. To build the software there is a requirement of the software development life cycle (SDLC). A software development process, also known as software development life cycle (SDLC), is the structure used in the development of software products. It is often regarded as part of the system development life cycle [1]. Nattagat et al [2] also state that SDLC, or alternatively, software-development life cycle, is very fundamental concept in information systems development. SDLC is the process of creating or altering information systems, and the model and methodologies that could be used to develop those system[3]. A proper SDLC models can help in organizing not only in building a software product but also serves as a basis for planning, preorganization, staffing, reorganization made and directives [4].

A good methodology will address at least the following issues : Planning, Planning, Scheduling, Programming, Activities involved, Roles, Artifacts and Training. The software engineering development has two ways to develop the projects that : traditional approach and object-oriented approach[5]. Object-Oriented methodologies for software development are aimed at viewing, modelling and implementing the system as a group of interacting objects, using the specialized modelling languages, activities and techniques needed to address the specific issues of the object oriented paradigm[6].

In Object-oriented development, information system is constructed so that the implementation of each part is quite independent of the implementation of the other part (decoupling of software), due to possibility of modularization. Each software object is coded and implemented and then integrated to the Information System. This continues until the entire Information System is completed[8].
