National Science Foundation (U.S.),1992      *Chemical and Bioprocess Engineering* Ricardo Simpson,Sudhir K.

Sastry,2013-12-04 The goal of this textbook is to provide first year engineering students with a firm grounding in the fundamentals of chemical and bioprocess engineering However instead of being a general overview of the two topics Fundamentals of Chemical and Bioprocess Engineering will identify and focus on specific areas in which attaining a solid competency is desired This strategy is the direct result of studies showing that broad based courses at the freshman level often leave students grappling with a lot of material which results in a low rate of retention Specifically strong emphasis will be placed on the topic of material balances with the intent that students exiting a course based upon this textbook will be significantly higher on Bloom s Taxonomy knowledge comprehension application analysis and synthesis evaluation creation relating to material balances In addition this book also provides students with a highly developed ability to analyze problems from the material balances perspective which leaves them with important skills for the future The textbook consists of numerous exercises and their solutions Problems are classified by their level of difficulty Each chapter has references and selected web pages to vividly illustrate each example In addition to engage students and increase their comprehension and rate of retention many examples involve real world situations      **Industrial Biotechnology** Debabrata Das,Soumya

Pandit,2021-05-06 Industrial Biotechnology offers a comprehensive overview of biochemical processes technologies and practical applications of industrial biotechnology The work comprises of chapters that discuss medium preparation inoculum preparation using industrial strain and upstream processing various fermentation processes and physico chemical separation processes for the purification of products and packaging Analyzes problems within biochemical processes Discusses stoichiometry of bioprocesses Covers upstream and downstream processing Offers a wealth of case studies of different biochemical production processes including those in development of food products vaccines and medicines single cell proteins amino acids cheese biodiesel biopesticides and more This book is aimed at advanced students industrial practitioners and researchers in biotechnology food engineering chemical engineering and environmental engineering
