Disposable Bioreactors Regine Eibl, Dieter Eibl, 2009-11-27 Over the past five years the immense financial pressure on the development and manufacturing of biopharmaceuticals has resulted in the increasing use and acceptance of disposables which are discarded after harvest and therefore intended only for single use. In fact, such disposables are implemented in all the main bioprocess production stages today and an even higher growth than those in the biopharmaceutical market is predicted, reaching double figures. Alongside disposable filter capsules, membrane chromatography units, tubing, connectors, flexible containers, processing or containing fluids, freezer systems, mixers, and pumps, and fully controlled disposable bioreactors of up to 2 000 L culture volume are already available on the market. Numerous studies highlight the advantages of disposable bioreactors and reveal their potential for simple, safe, and fast seed inoculum production, process development, and small as well as middle volume production, e.g. bioactive substances, viruses for vaccines, and gene therapies etc. They suggest that such disposable bioreactors, typically characterized by the cultivation chamber or bag from plastic materials, may be advantageous for plant, animal, and microbial cells. Running industrial activities such as CFD modelling, development of single use process, monitoring and control technology, and standardized film formulations are attempting to resolve the limitations of the current disposable bioreactors. These achievements along with substantial improvements in product yield will reduce the use of

Fundamentals of Modern Bioprocessing Sarfaraz K. Niazi, Justin L. Brown, 2017-07-27 Biological drug and vaccine manufacturing has quickly become one of the highest value fields of bioprocess engineering and many bioprocess engineers are now finding job opportunities that have traditionally gone to chemical engineers. *Fundamentals of Modern Bioprocessing* addresses this growing demand. Written by experts well established in the field, this book connects the principles and applications of bioprocessing engineering to healthcare product manufacturing and expands on areas of opportunity for qualified bioprocess engineers and students. The book is divided into two sections: the first half centers on the engineering fundamentals of bioprocessing, while the second half serves as a handbook offering advice and practical applications. Focused on the fundamental principles at the core of this discipline, this work outlines every facet of design, component selection, and regulatory concerns. It discusses the purpose of bioprocessing to produce products suitable for human use, describes the manufacturing technologies related to bioprocessing, and explores the rapid expansion of bioprocess engineering applications relevant to health care product manufacturing. It also considers the future of bioprocessing, the use of disposable components, which is the fastest growing area in the field of bioprocessing to replace traditional stainless steel. In addition, this text discusses the many types of genetically modified organisms, outlines laboratory techniques, includes the most recent developments, serves as a reference, and contains an extensive bibliography. Emphasizes biological manufacturing using recombinant processing, which begins with creating a genetically modified organism using recombinant techniques. *Fundamentals of Modern Bioprocessing* outlines both the principles and applications of bioprocessing engineering related to healthcare product manufacturing. It lays out the basic concepts, definitions, methods, and applications of bioprocessing. A single volume, comprehensive reference developed to meet the needs of students with a bioprocessing background, it can also be used as a source for professionals in the field.
