Airline Reservation System Project Manual:

From Airline Reservations to Sonic the Hedgehog Martin Campbell-Kelly, 2004-02-27 A business history of the software industry from the days of custom programming to the age of mass market software and video games From its first glimmerings in the 1950s the software industry has evolved to become the fourth largest industrial sector of the US economy Starting with a handful of software contractors who produced specialized programs for the few existing machines the industry grew to include producers of corporate software packages and then makers of mass market products and recreational software This book tells the story of each of these types of firm focusing on the products they developed the business models they followed and the markets they served By describing the breadth of this industry Martin Campbell Kelly corrects the popular misconception that one firm is at the center of the software universe He also tells the story of lucrative software products such as IBM's CICS and SAP's R/3 which though little known to the general public lie at the heart of today's information infrastructure With its wealth of industry data and its thoughtful judgments this book will become a starting point for all future investigations of this fundamental component of computer history **Coding Literacy** Annette

Vee, 2017-07-28 How the theoretical tools of literacy help us understand programming in its historical social and conceptual contexts The message from educators the tech community and even politicians is clear everyone should learn to code To emphasize the universality and importance of computer programming promoters of coding for everyone often invoke the concept of literacy drawing parallels between reading and writing code and reading and writing text In this book Annette Vee examines the coding as literacy analogy and argues that it can be an apt rhetorical frame The theoretical tools of literacy help us understand programming beyond a technical level and in its historical social and conceptual contexts Viewing programming from the perspective of literacy and literacy from the perspective of programming she argues shifts our understandings of both Computer programming becomes part of an array of communication skills important in everyday life and literacy augmented by programming becomes more capacious Vee examines the ways that programming is linked with literacy in coding literacy campaigns considering the ideologies that accompany this coupling and she looks at how both writing and programming encode and distribute information She explores historical parallels between writing and programming using the evolution of mass textual literacy to shed light on the trajectory of code from military and government infrastructure to large scale businesses to personal use Writing and coding were institutionalized domesticated and then established as a basis for literacy Just as societies demonstrated a literate mentality regardless of the literate status of individuals Vee argues a computational mentality is now emerging even though coding is still a specialized skill
