Geschwindner, 2011-12-20 Geschwindner's 2nd edition of Unified Design of Steel Structures provides an understanding that structural analysis and design are two integrated processes as well as the necessary skills and knowledge in investigating designing and detailing steel structures utilizing the latest design methods according to the AISC Code. The goal is to prepare readers to work in design offices as designers and in the field as inspectors. This new edition is compatible with the 2011 AISC code as well as marginal references to the AISC manual for design examples and illustrations which was seen as a real advantage by the survey respondents. Furthermore, new sections have been added on Direct Analysis Torsional and flexural torsional buckling of columns, Filled HSS columns and Composite column interaction. More real world examples are included in addition to new use of three dimensional illustrations in the book and in the image gallery, an increased number of homework problems and media approach. Solutions Manual Image Gallery Using the Engineering Literature Bonnie A. Osif, 2016-04-19 With the encroachment of the Internet into nearly all aspects of work and life, it seems as though information is everywhere. However, there is information and then there is correct, appropriate and timely information. While we might love being able to turn to Wikipedia for encyclopedia-like information or search Google for the thousands of links **Steel Structures** Charles G. Salmon, John Edwin Johnson, Faris Amin Malhas, 2009 The design of structural steel members has developed over the past century from a simple approach involving a few basic properties of steel and elementary mathematics to a more sophisticated treatment demanding a thorough knowledge of structural and material behavior. Steel Structures Design and Behavior 5e strives to present in a logical manner the theoretical background needed for developing and explaining design requirements. Beginning with coverage of background material including references to pertinent research, the development of specific formulas used in the AISC Specifications is followed by a generous number of design examples explaining in detail the process of selecting minimum weight members to satisfy given conditions **Tubular Structures XI** Jeffrey A. Packer, 2017-10-02 This topical book contains the latest scientific and engineering developments in the field of tubular steel structures as presented at the 11th International Symposium and IIW International Conference on Tubular Structures. The International Symposium on Tubular Structures (ISTS) has a long standing reputation for being the principal showcase for manufactured tubing and the prime international forum for discussion of research developments and applications in this field. Various key and emerging subjects in the field of hollow structural sections are covered such as novel applications and case studies, static and fatigue behaviour of connections, joints, concrete filled and composite tubular members, earthquake resistance, specification and code developments, material properties and structural reliability, impact resistance and brittle fracture, fire resistance, casting and fabrication innovations.
