without seeing the mathematical or abstract parts alongside practical laws Physics is to mathematics what Tony Stark Iron Man is to J A R V I S or F R I D A Y The groundwork of computations statistics simulations etc is done by F R I D A Y But the real work of fighting the villains is done by Iron Man **Ten Equations to Explain the Mysteries of Modern**

Astrophysics Santhosh Mathew, 2019-06-15 This book introduces ten equations that transcend the boundaries of time and space It takes readers through a journey of self discovery where they will learn the history science and significance of these equations in the context of their lives Moreover the mathematical beauty of these equations is presented in a profoundly modest fashion to highlight the idea that equations are eternal but humans are transient Each chapter offers readers a sublime experience and provides insights into the laws of nature that address the ever expanding intricacy of our universe The history of humankind according to Franz Kafka is the instant between two strides taken by a traveler Therefore what remains eternal when we finish our journey on this tiny rocky planet is our deep desire to connect with everything else in this universe These equations capture the essence of that aspiration and remain everlasting while we continue our trivial human pursuits These equations change the way we live and view the world and will outlast even the most enduring signs of our civilization They have the potential to take us from planet to planet and perhaps to make us a cosmic species They can destroy the last strand of DNA to terminate life as we know it and generate life again from the fundamental laws of nature While these equations remain intangible they can create a tangible world yet remain truly eternal
