Pollutant (Examples)	Source(s)	Problem(s)
BOD: - Oxygen requirement of bacterial decomposition of dead organic matter - Includes: - agricultural 50% - DO should be at least 5mg/l	- Decomposition of dead organic matter - Includes agriculture (50%) combined sewer system	- Creates a dead zone - Killing fish and decreases DO
Fecal Coliforms (E. coli)	Waste from mammals and birds, agricultural storm runoff (feedlots) and human sewage	Disease, the level of harm depends on the type of fecal coliform
Crude Oil - Volatile portion evaporates - Oil starts to weather and breaks down immediately - Weather components from tarballs that wash up on shore	Tankers, offshore drillings, etc.	- Volatile evaporates → air pollution and toxic - Coat the feathers of birds so they can't fly - Coat the fur of mammals - Hard "crust" on the surface of food eaten by birds and mammals - Tarballs persist in the environment

Describe what happened to the system of the Aral Sea in terms of its inputs, outputs, and size.

The Aral Sea is used to be the fourth largest sea on the planet and people used to grow rice and cotton and it wasn't very efficient irrigation. Then in 2014, it became a desert.

What happened to the water in the Aral Sea? Input: the water. Output: the water.

What type of system is Earth with respect to matter? What about energy? Earth is a closed system (it is the atom that makes up) and is conserved on Earth. It is an open system.

What does the First Law of Thermodynamics state? How does this relate to the Earth system? "Energy cannot be created or destroyed, it can only change form or be transferred to another system." The energy from the sun is transferred to the Earth through nuclear fusion. The energy from the sun is transferred to the Earth through nuclear fusion. The energy from the sun is transferred to the Earth through nuclear fusion.

What does the Second Law of Thermodynamics state? How does this relate to the Earth system? The second law of thermodynamics states that you cannot break even, it is changed from one form to another, it always moves from a more useful form to a less useful form.

Based on the second law of thermodynamics, not all of the energy from the sun goes to move the car forward. What happens to the rest? The rest can be good for air conditioning, and charging your phone.

Using a systems analysis approach (inputs vs. outputs), describe why global warming is occurring. Inputs (global warming) are absorbing and killing the carbons that maintain temperate heating (output) is occurring.

Environmental Science Student Workbook for Use with Withgott & Laposata's Environment David Tamm, 2021-02-23 Barron's 5 Steps and the others are great resources for reviewing at the end of the year but this Tamm's Textbook Tools workbook accompanies students all year long. It is filled with assignments that follow the regular textbook chapter by chapter page by page. It gets students to read the book. It can also be used as a review since it is an ongoing notebook of the entire curriculum. All you need is the Miller Spoolman textbook either physical or online. Teachers can copy at will and parents can use it as a student consumable. The rationale for having this workbook now is that publishers are putting so much of their extras online that traditional paper classwork can be left lacking. But now no matter if the textbook itself is written in ink or electrons, serious students will find this a valuable way to write in and keep notes for themselves like generating a portfolio. The activities in this workbook challenge students to apply the concepts, think of real examples, diagram every chapter, and think through things with the authors. It has been updated with examples relating to Covid and the Biden Administration's environmental policy positions. Find TTT Tamm's Textbook Tools on FB or click the author name at the top of this page for the other 40 titles in this series.
