Applied Spatial Data Analysis with R Roger S. Bivand, Edzer Pebesma, Virgilio Gómez-Rubio, 2013-06-21 Applied Spatial Data Analysis with R second edition is divided into two basic parts the first presenting R packages functions classes and methods for handling spatial data This part is of interest to users who need to access and visualise spatial data Data import and export for many file formats for spatial data are covered in detail as is the interface between R and the open source GRASS GIS and the handling of spatio temporal data The second part showcases more specialised kinds of spatial data analysis including spatial point pattern analysis interpolation and geostatistics areal data analysis and disease mapping The coverage of methods of spatial data analysis ranges from standard techniques to new developments and the examples used are largely taken from the spatial statistics literature All the examples can be run using R contributed packages available from the CRAN website with code and additional data sets from the book s own website Compared to the first edition the second edition covers the more systematic approach towards handling spatial data in R as well as a number of important and widely used CRAN packages that have appeared since the first edition This book will be of interest to researchers who intend to use R to handle visualise and analyse spatial data It will also be of interest to spatial data analysts who do not use R but who are interested in practical aspects of implementing software for spatial data analysis It is a suitable companion book for introductory spatial statistics courses and for applied methods courses in a wide range of subjects using spatial data including human and physical geography geographical information science and geoinformatics the environmental sciences ecology public health and disease control economics public administration and political science The book has a website where complete code examples data sets and other support material may be found <http://www.asdar-book.org> The authors have taken part in writing and maintaining software for spatial data handling and analysis with R in concert since 2003

Applied Spatial Data Analysis with R Roger S. Bivand, Edzer J. Pebesma, Virgilio Gómez-Rubio, 2008-08-24 We began writing this book in parallel with developing software for handling and analysing spatial data with R R Development Core Team 2008 though the book is now complete software development will continue in the R community fashion of rich and satisfying interaction with users around the world of rapid releases to resolve problems and of the usual joys and frustrations of getting things done There is little doubt that without pressure from users the development of R would not have reached its present scale and the same applies to analysing spatial data analysis with R It would however not be sufficient to describe the development of the R project mainly in terms of narrowly defined utility In addition to being a community project concerned with the development of world class data analysis software implementations it promotes specific choices with regard to how data analysis is carried out R is open source not only because open source software development including the dynamics of broad and inclusive user and developer communities is arguably an attractive and successful development model

Bayesian Computation with R Jim Albert, 2009-04-20 There has been dramatic growth in the development and application of Bayesian inference in statistics Berger 2000 documents the increase in Bayesian activity by the number of published research articles the number of books and the extensive number of applications of Bayesian articles in applied disciplines such as science and engineering One reason for the dramatic growth in Bayesian modeling is the availability of computational algorithms to compute the range of integrals that are necessary in a Bayesian posterior analysis Due to the speed of modern computers it is now possible to use the Bayesian paradigm to fit very complex models that cannot be fit by alternative frequentist methods To fit Bayesian models one needs a statistical computing environment This environment should be such that one can write short scripts to define a Bayesian model use or write functions to summarize a posterior distribution use functions to simulate from the posterior distribution construct graphs to illustrate the posterior inference An environment that meets these requirements is the R system R provides a wide range of functions for data manipulation calculation and graphical displays Moreover it includes a well developed simple programming language that users can extend by adding new functions Many such extensions of the language in the form of packages are easily downloadable from the Comprehensive R Archive Network CRAN
